

Spatial Configuration of Sexual Homicide

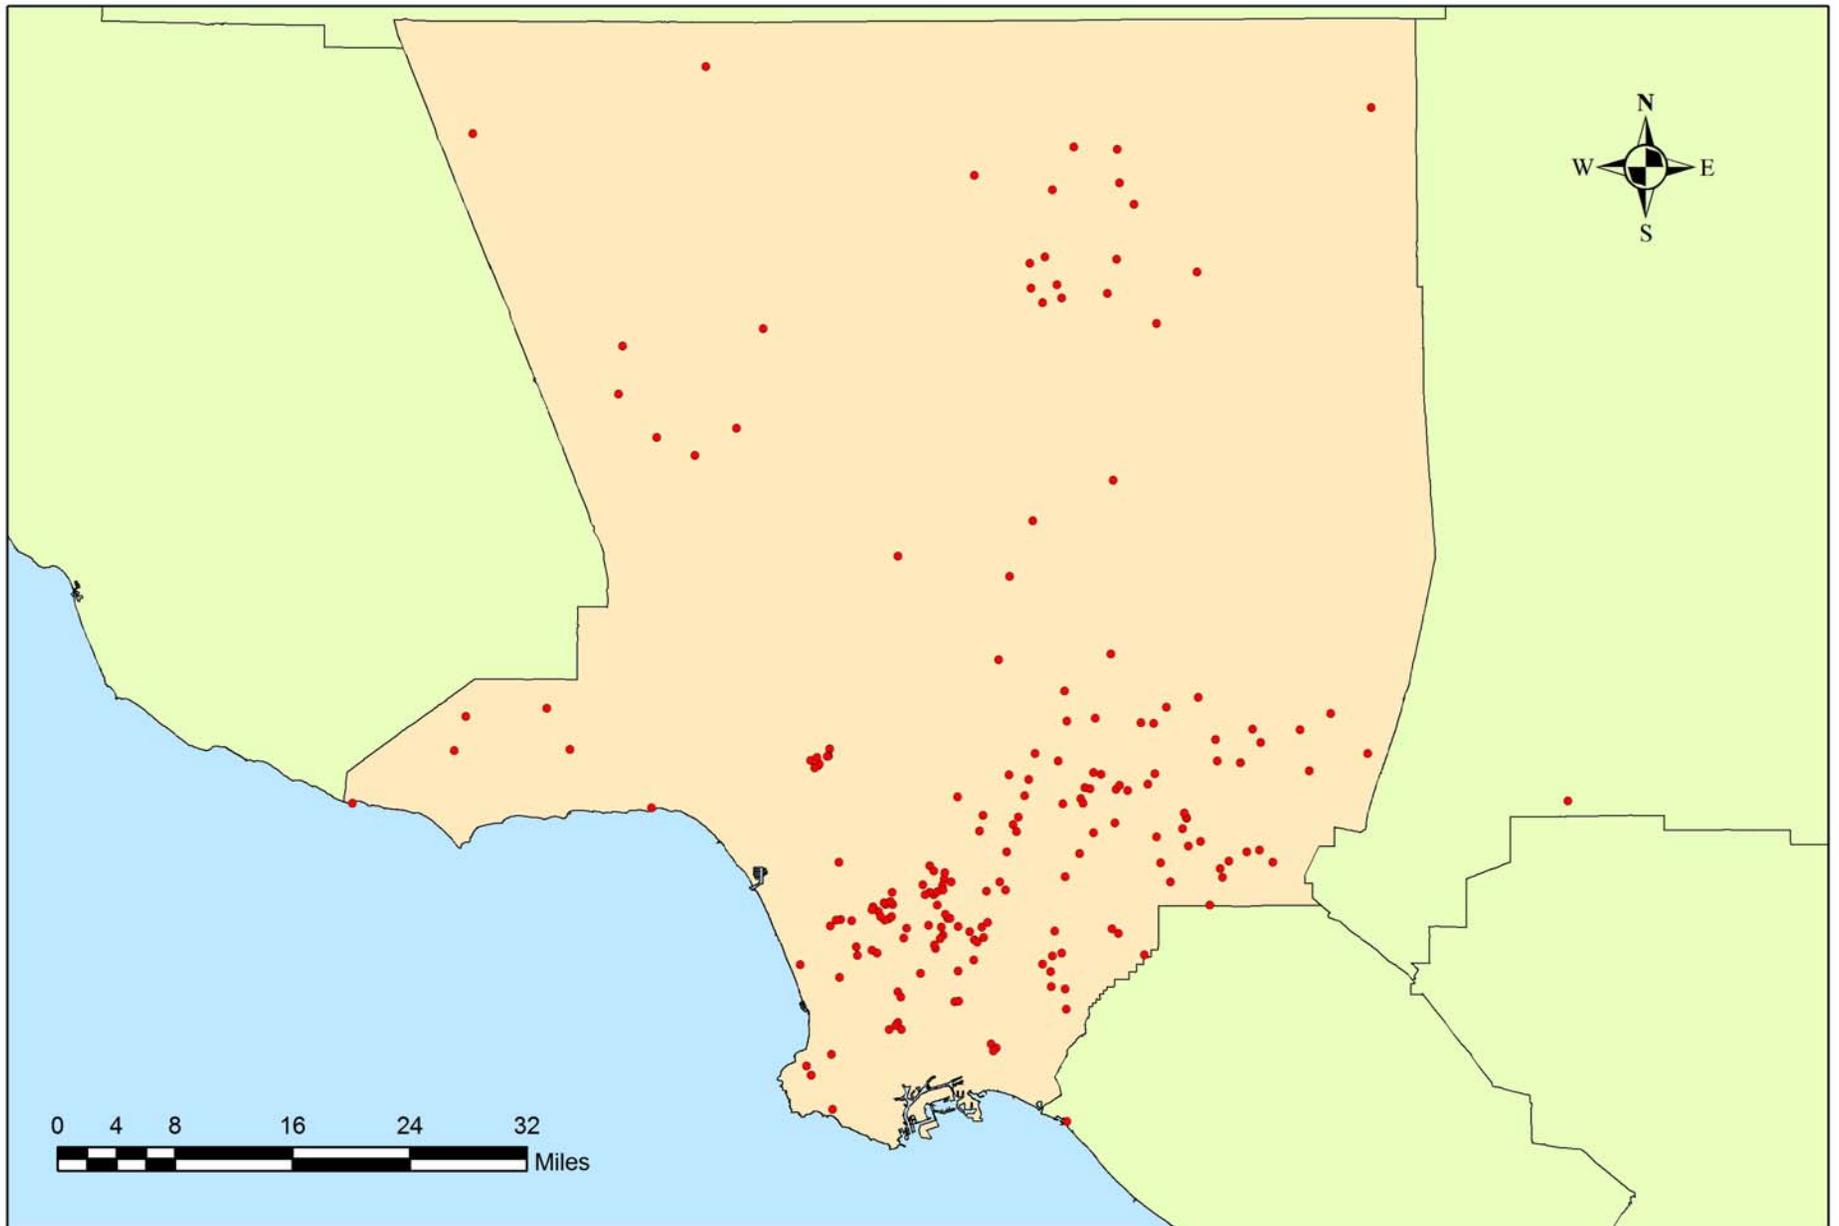

A 25-year study of sexual
homicides in Los Angeles County
(1980 through 2004)

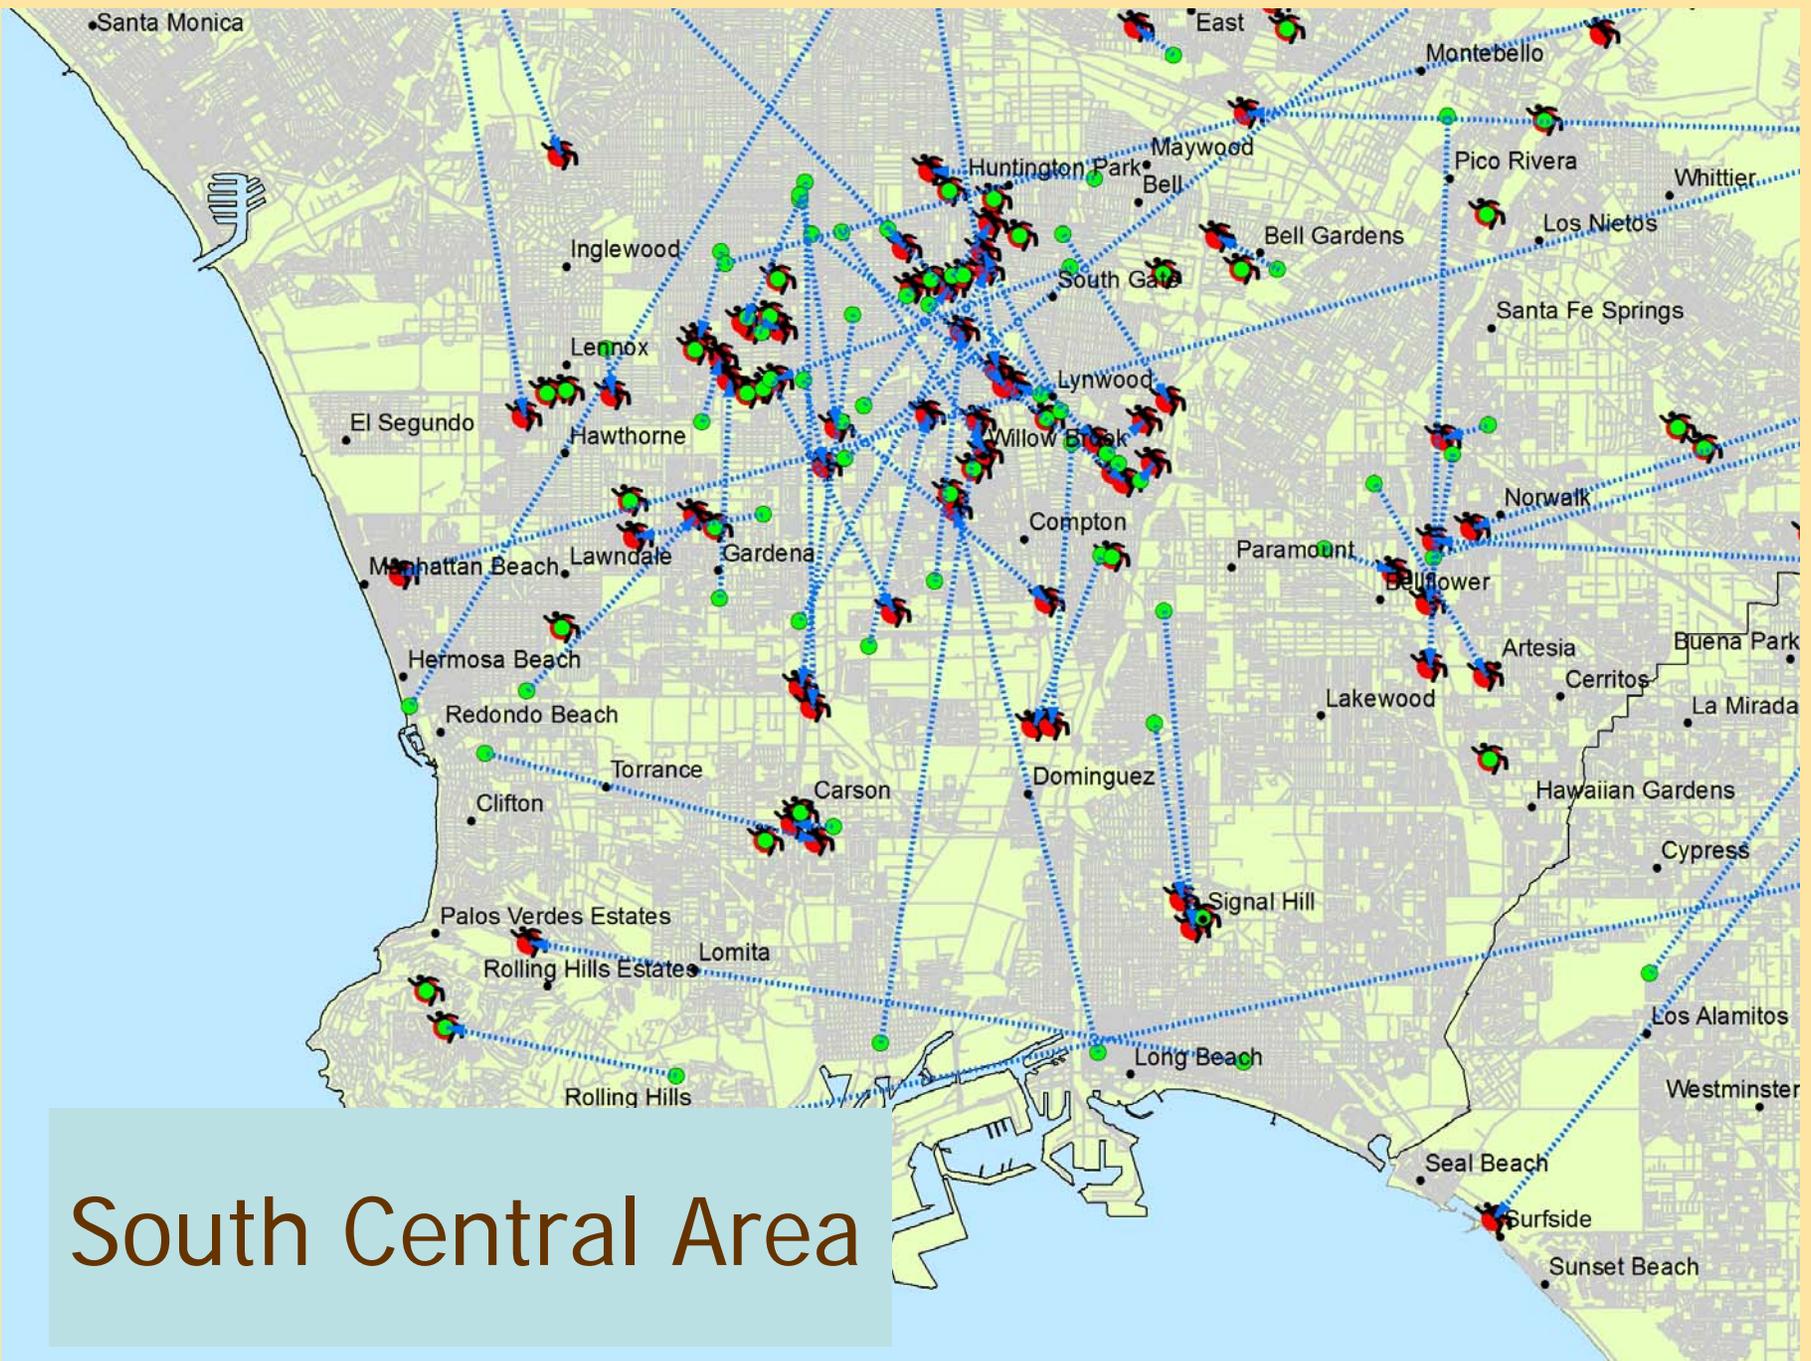

Isaac T. Van Patten, Radford University

&

Paul Q. Delhauer, LASD Homicide Bureau

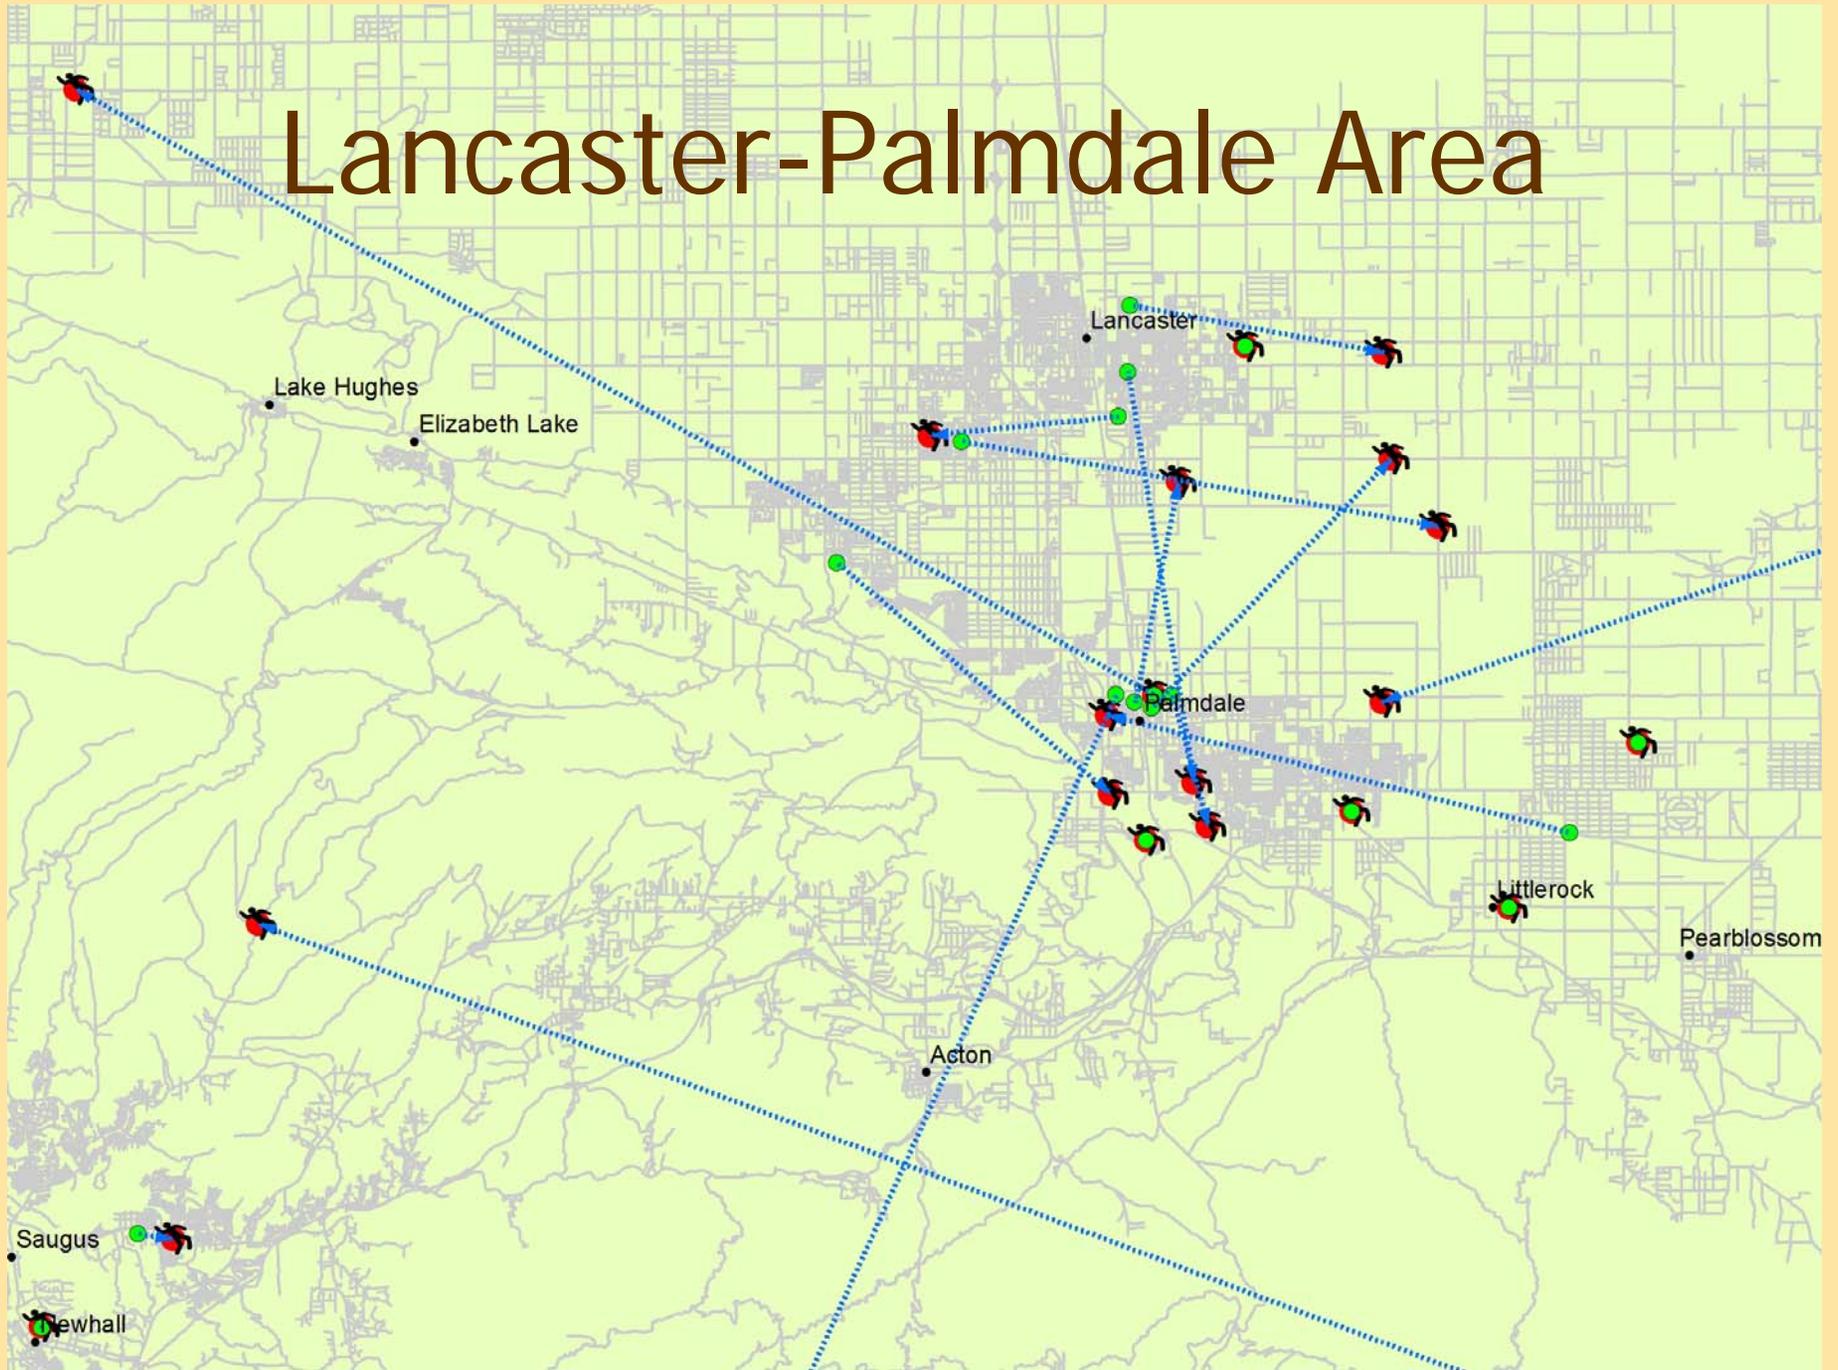

Los Angeles County Sexual Homicides

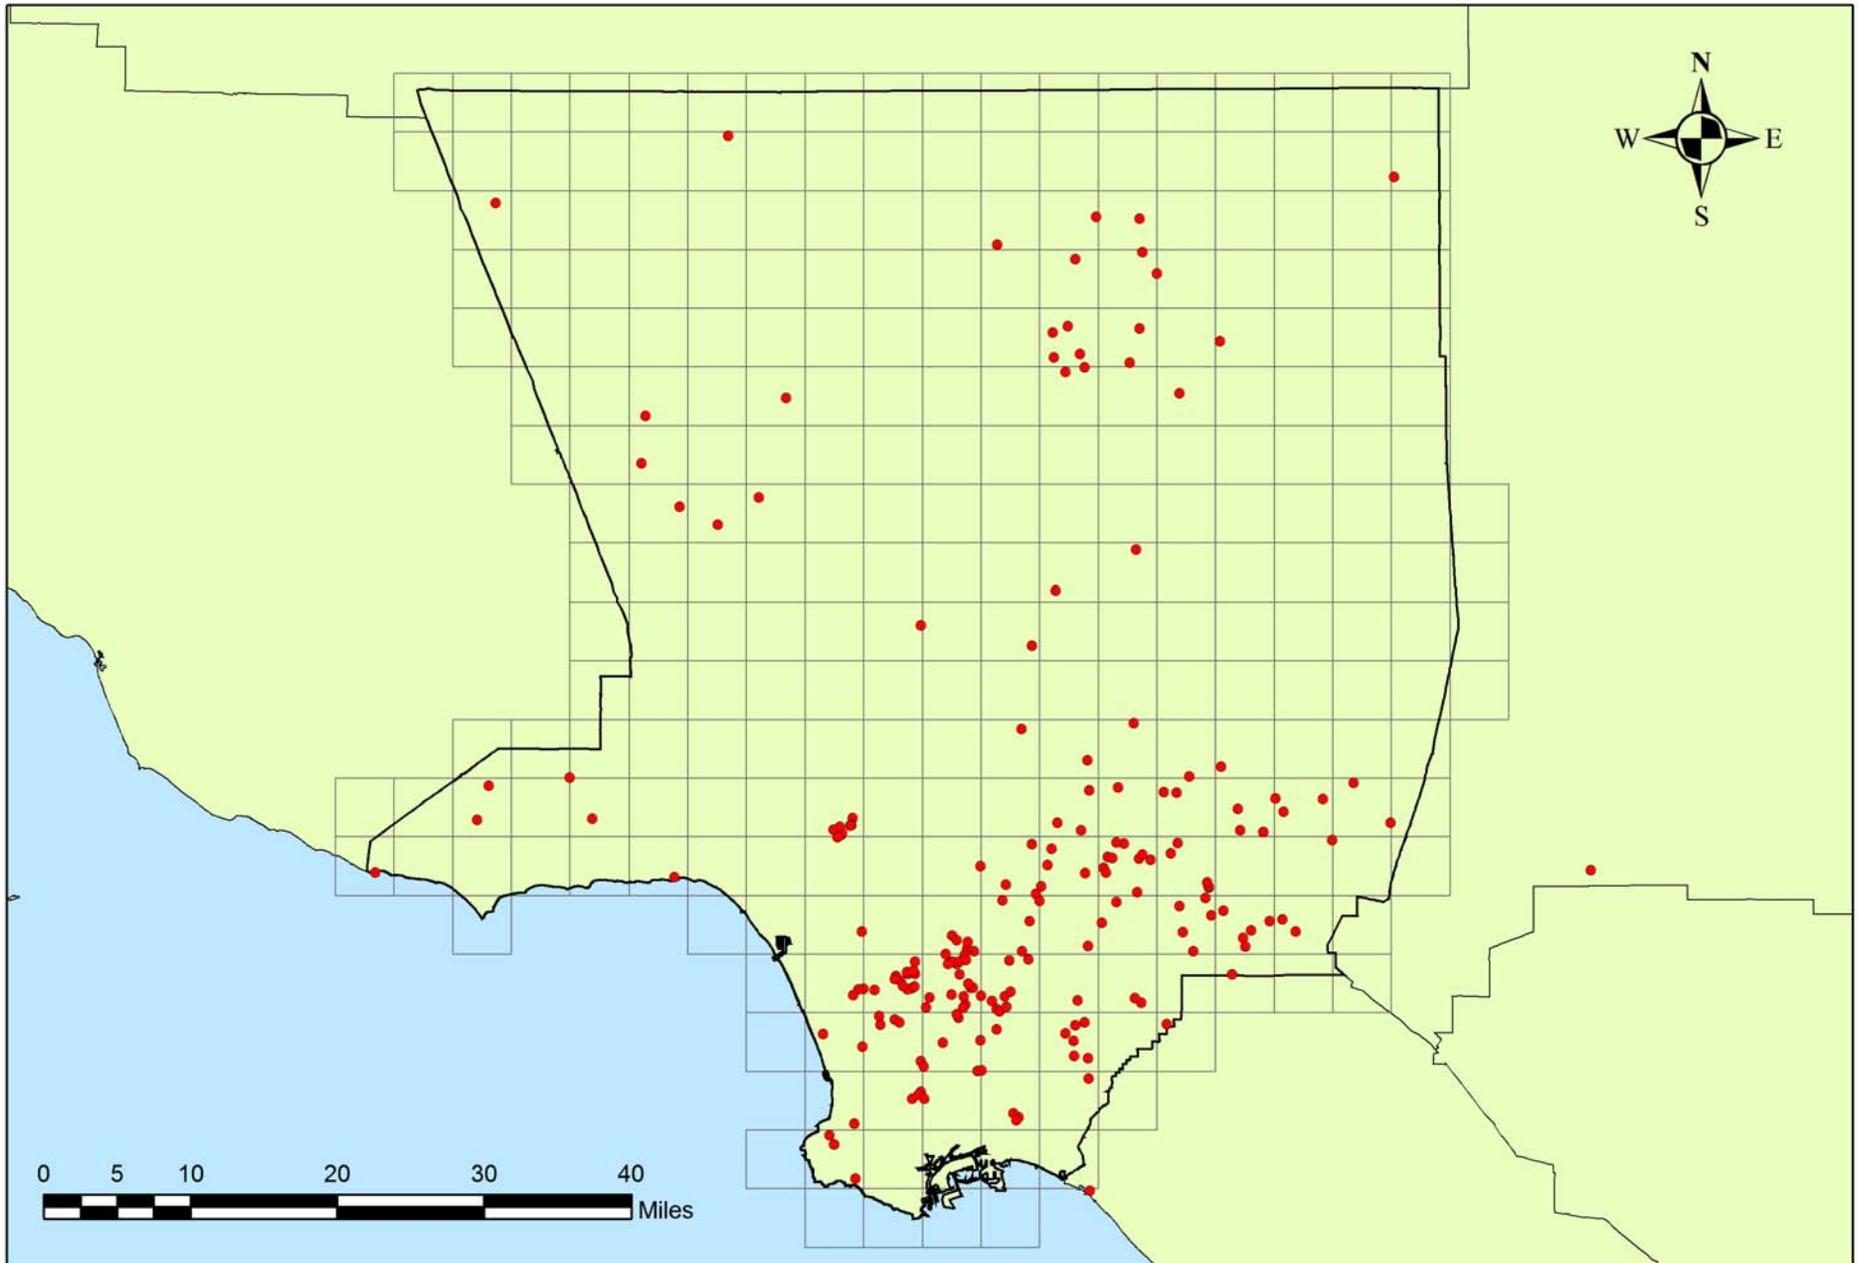

South Central Area

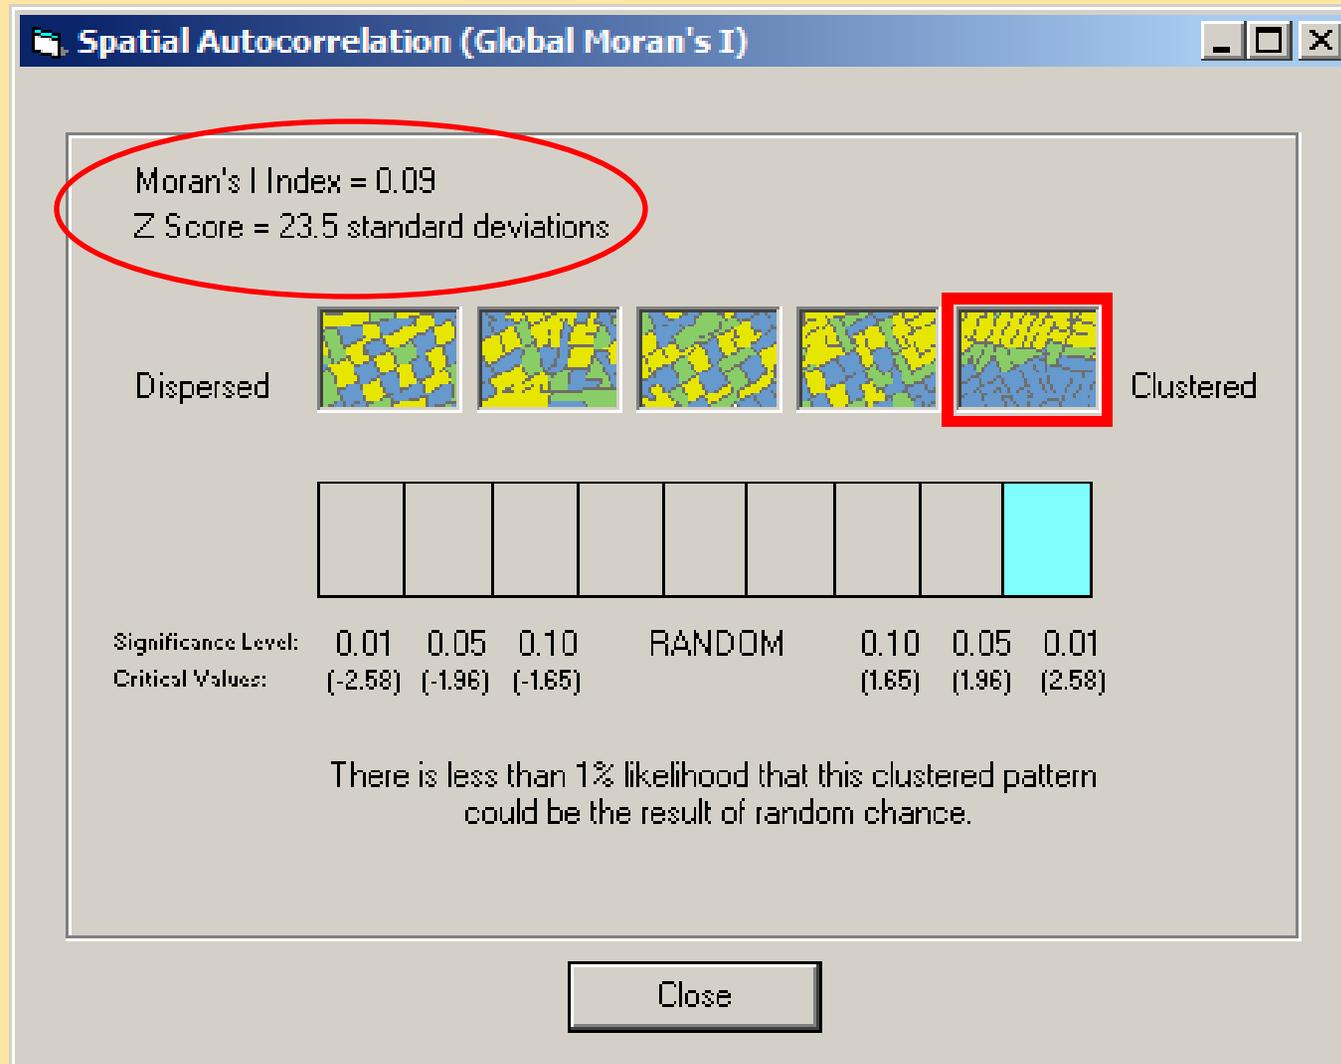

Lancaster-Palmdale Area

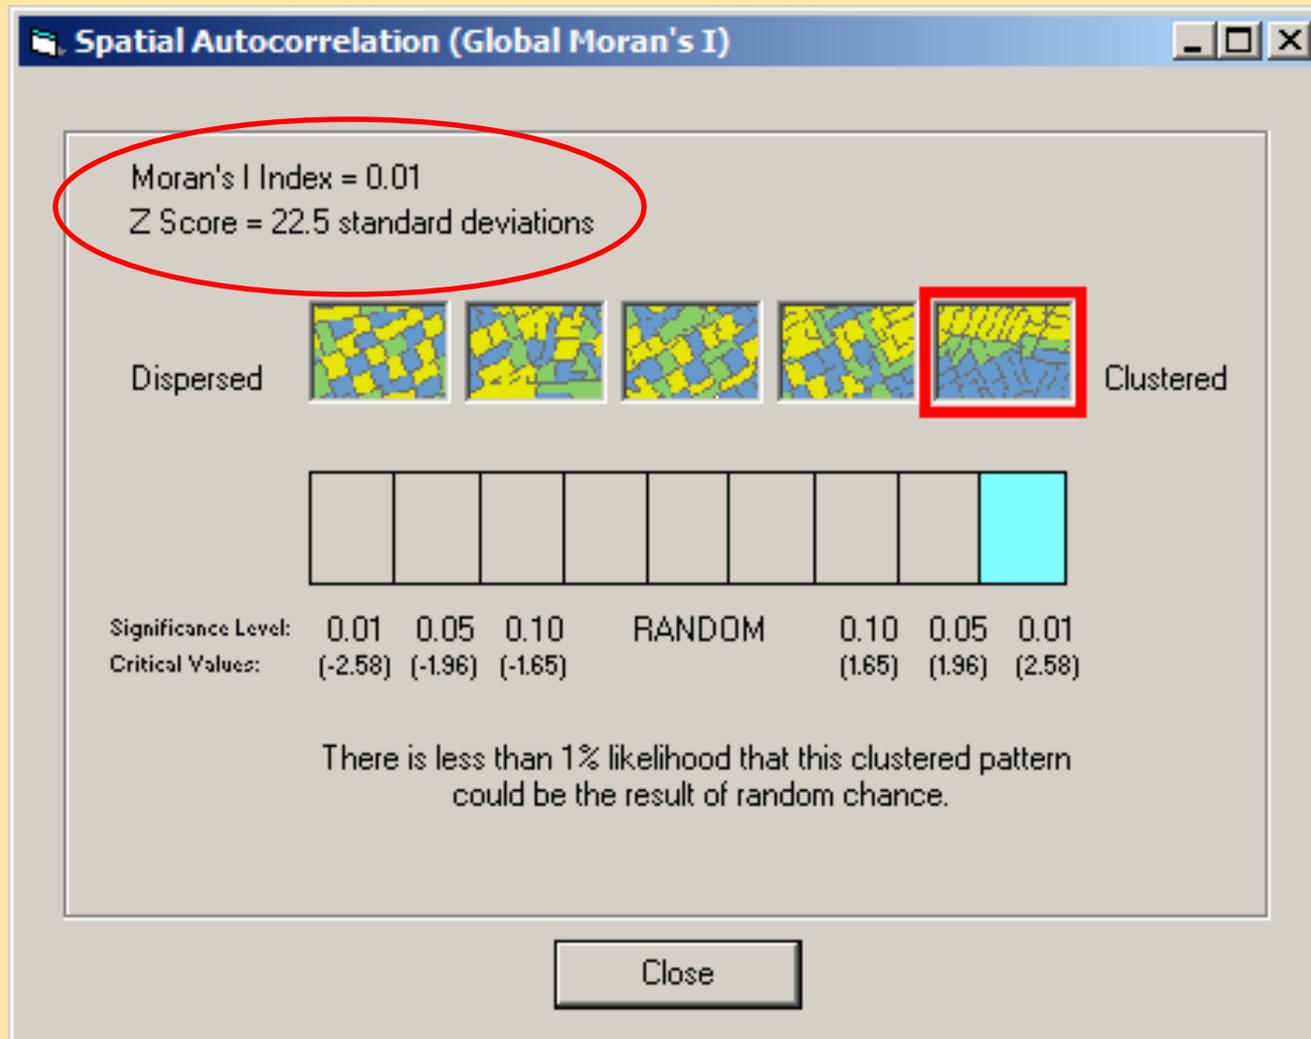

Four-Mile Grids for Aggregation

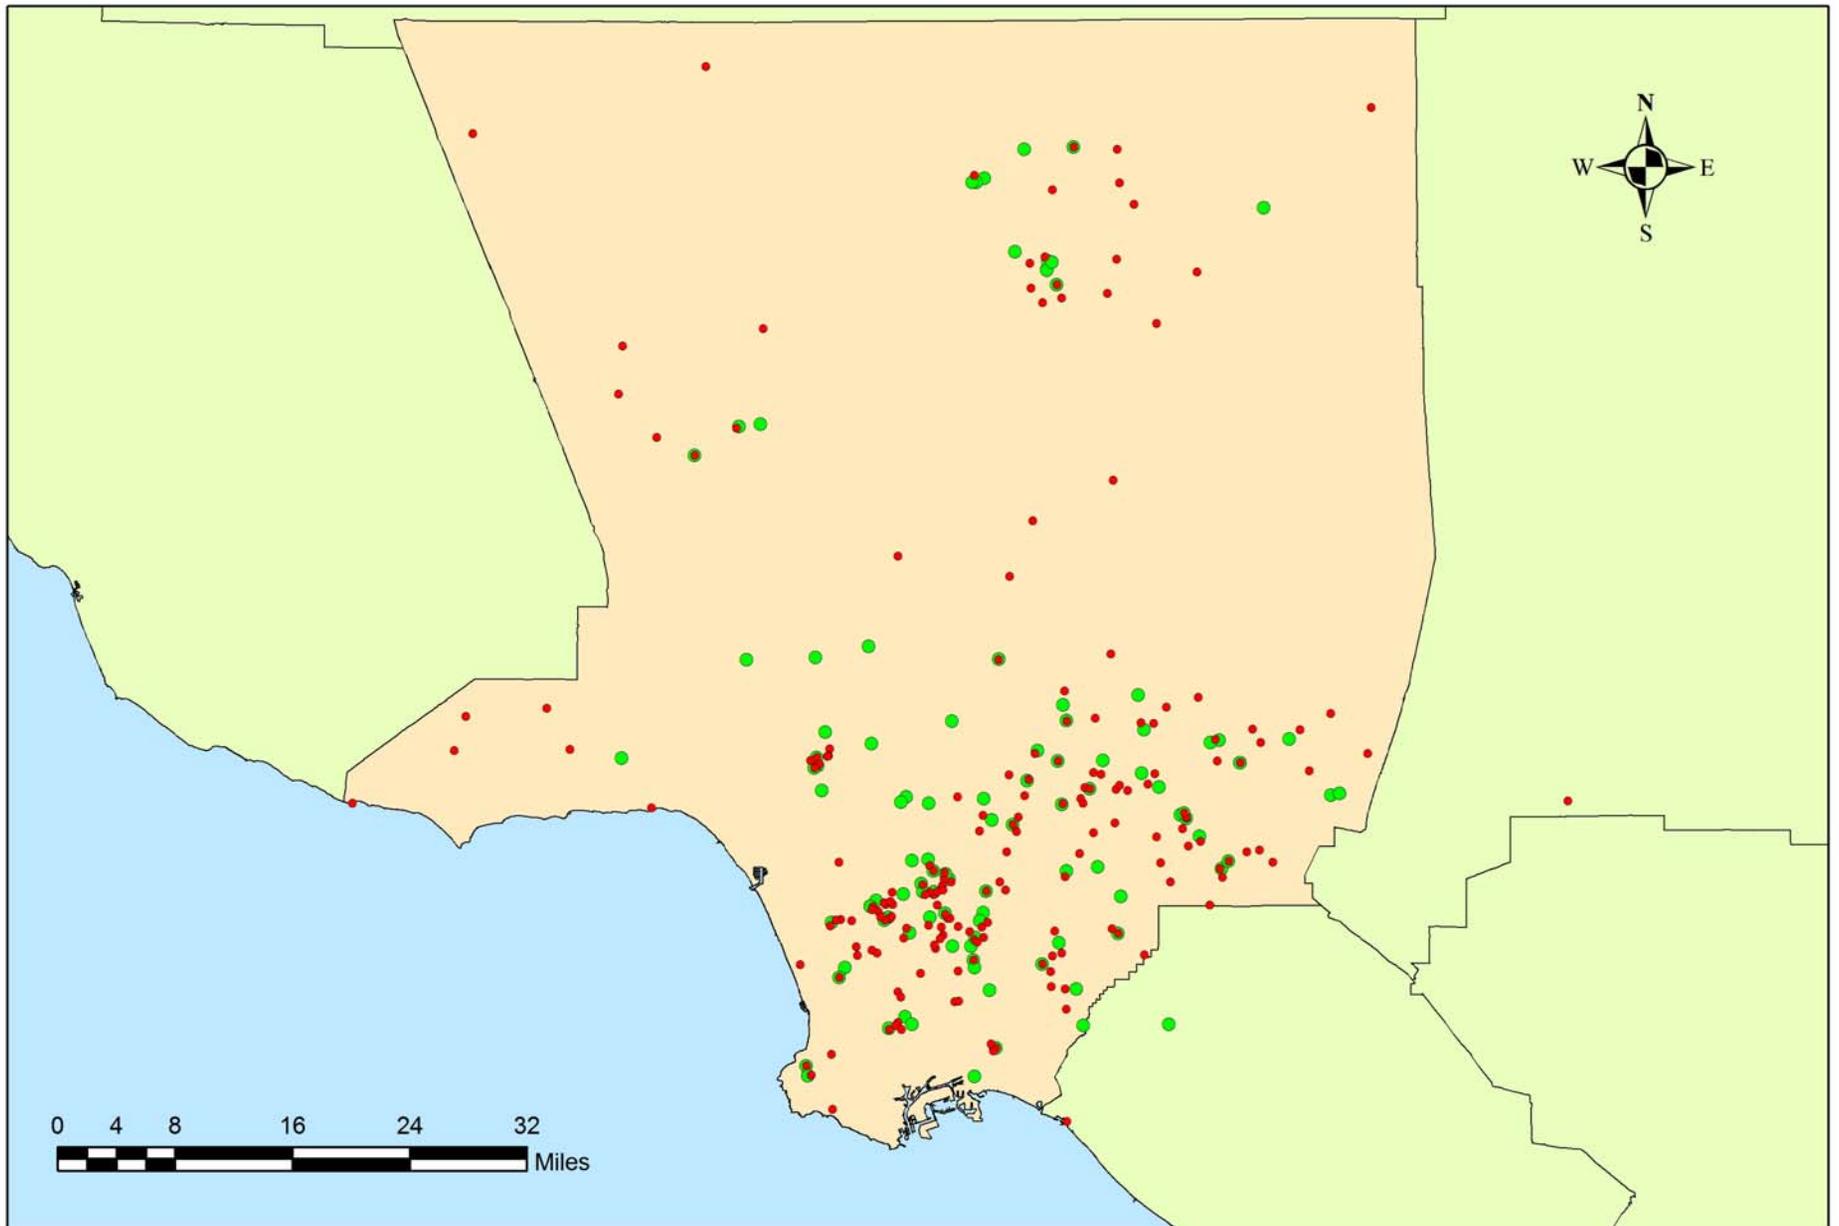

Incidents: Spatial Autocorrelation

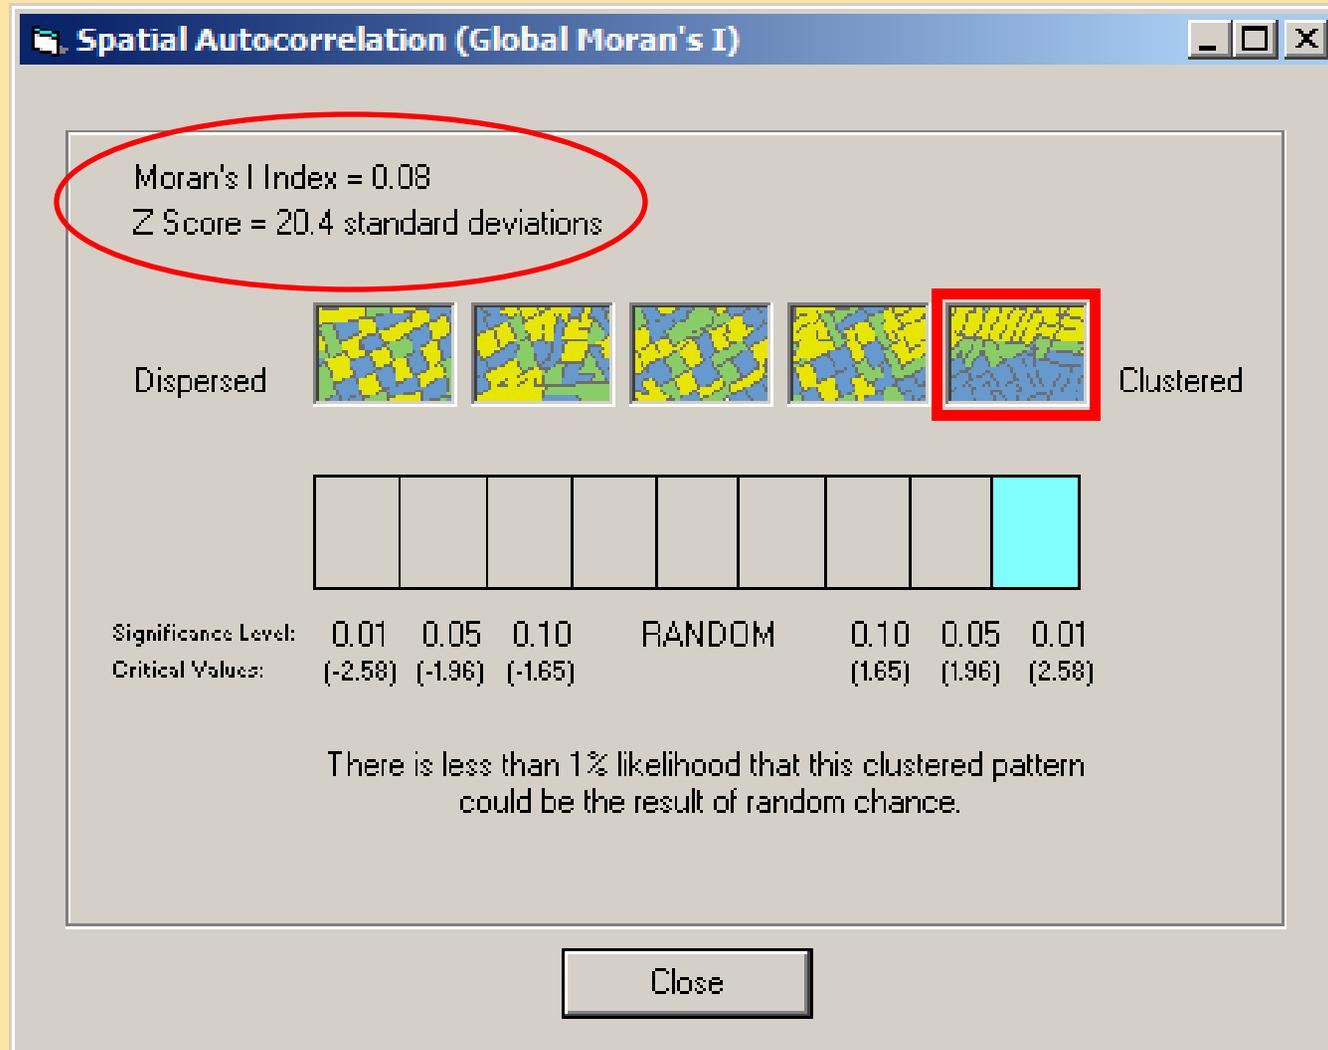

Moran's I based on TAZs

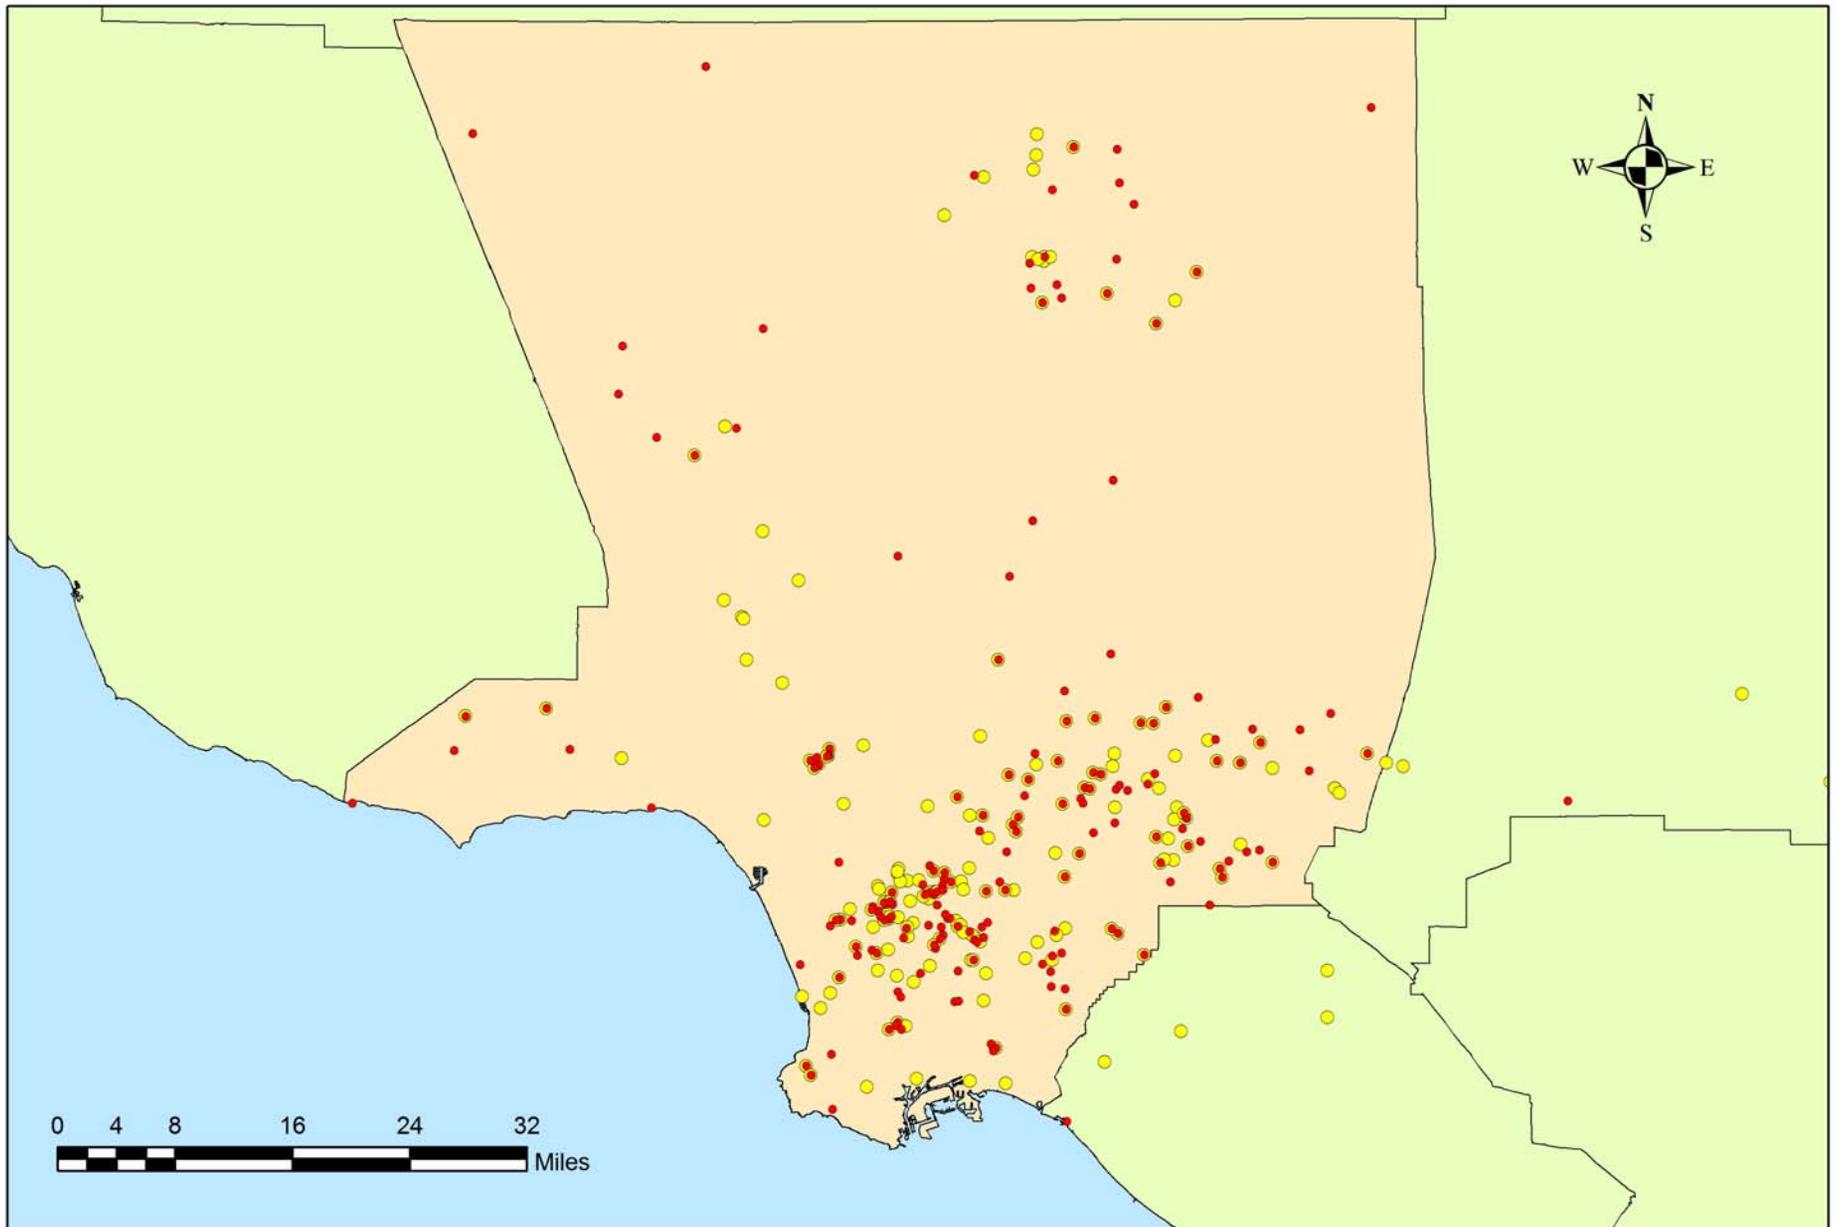

Offender Residence & Incident Site

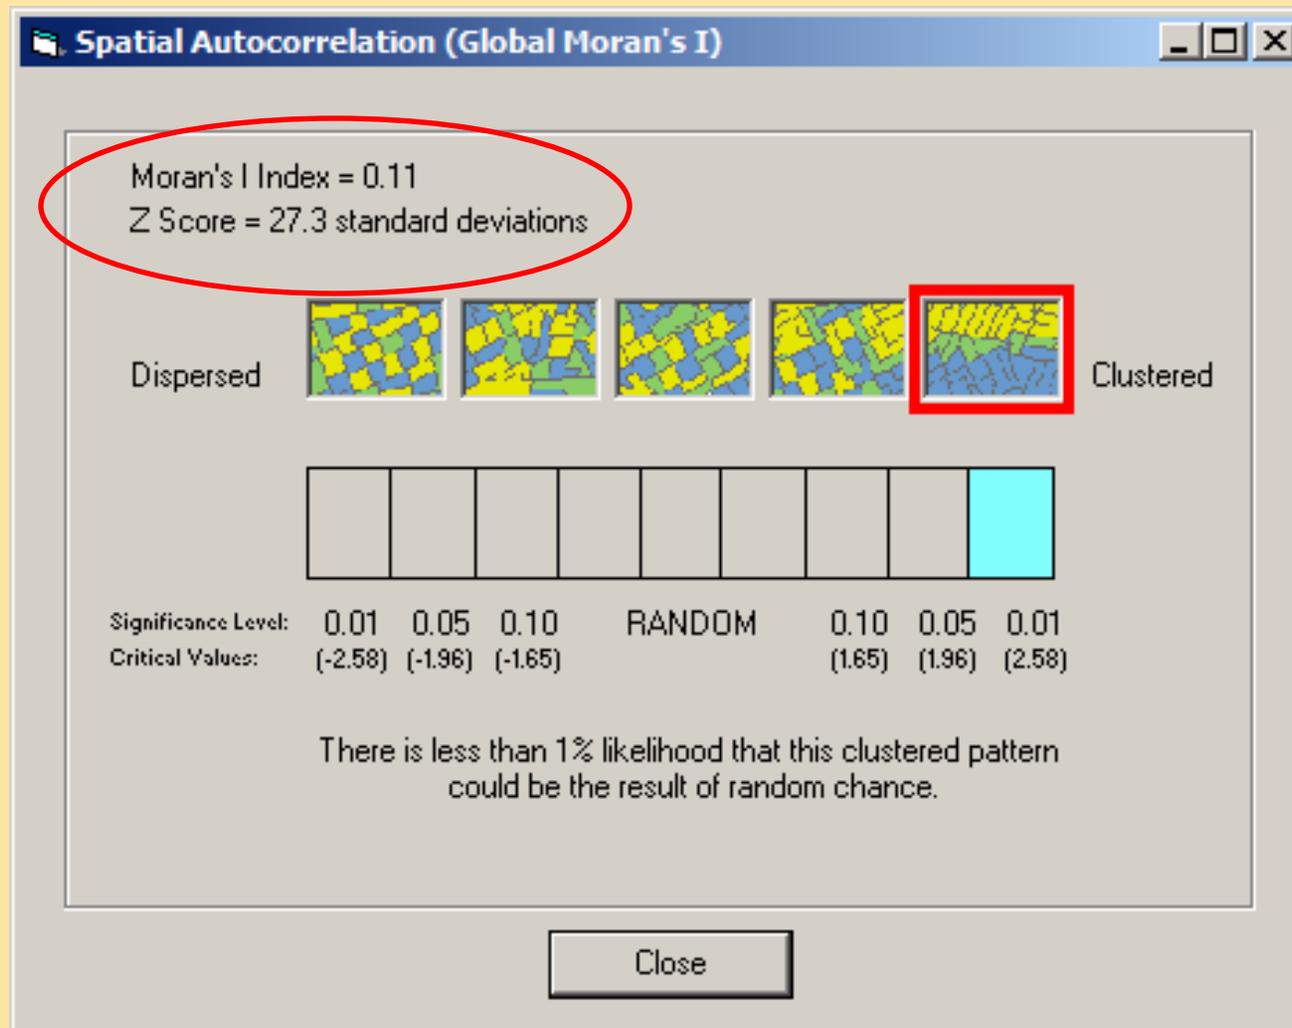

Offender Residence: Spatial Autocorrelation

Victim Residence & Incident Site

Victim Resident: Spatial Autocorrelation

The Data

TABLE 1 – *Sample size by location*

Location	Count	Percent of total (N=197)
Incident/Occurrence Site	197	100%
Victim Residence	192	97.5%
Encounter Site	136	69%
Attack Site	127	64.5%
Murder Site	126	63.9%
Offender Residence	110	55.8%
Post-Offense Location	98	49.7%

TABLE 2 – *Victim and offender demographics*

	Offender		Victim	
	N	Percent	N	Percent
Male	139	98.6	38	19.1
Female	2	1.4	161	80.9
Total	141*	100	199	100

* *refers to known, primary offenders only*

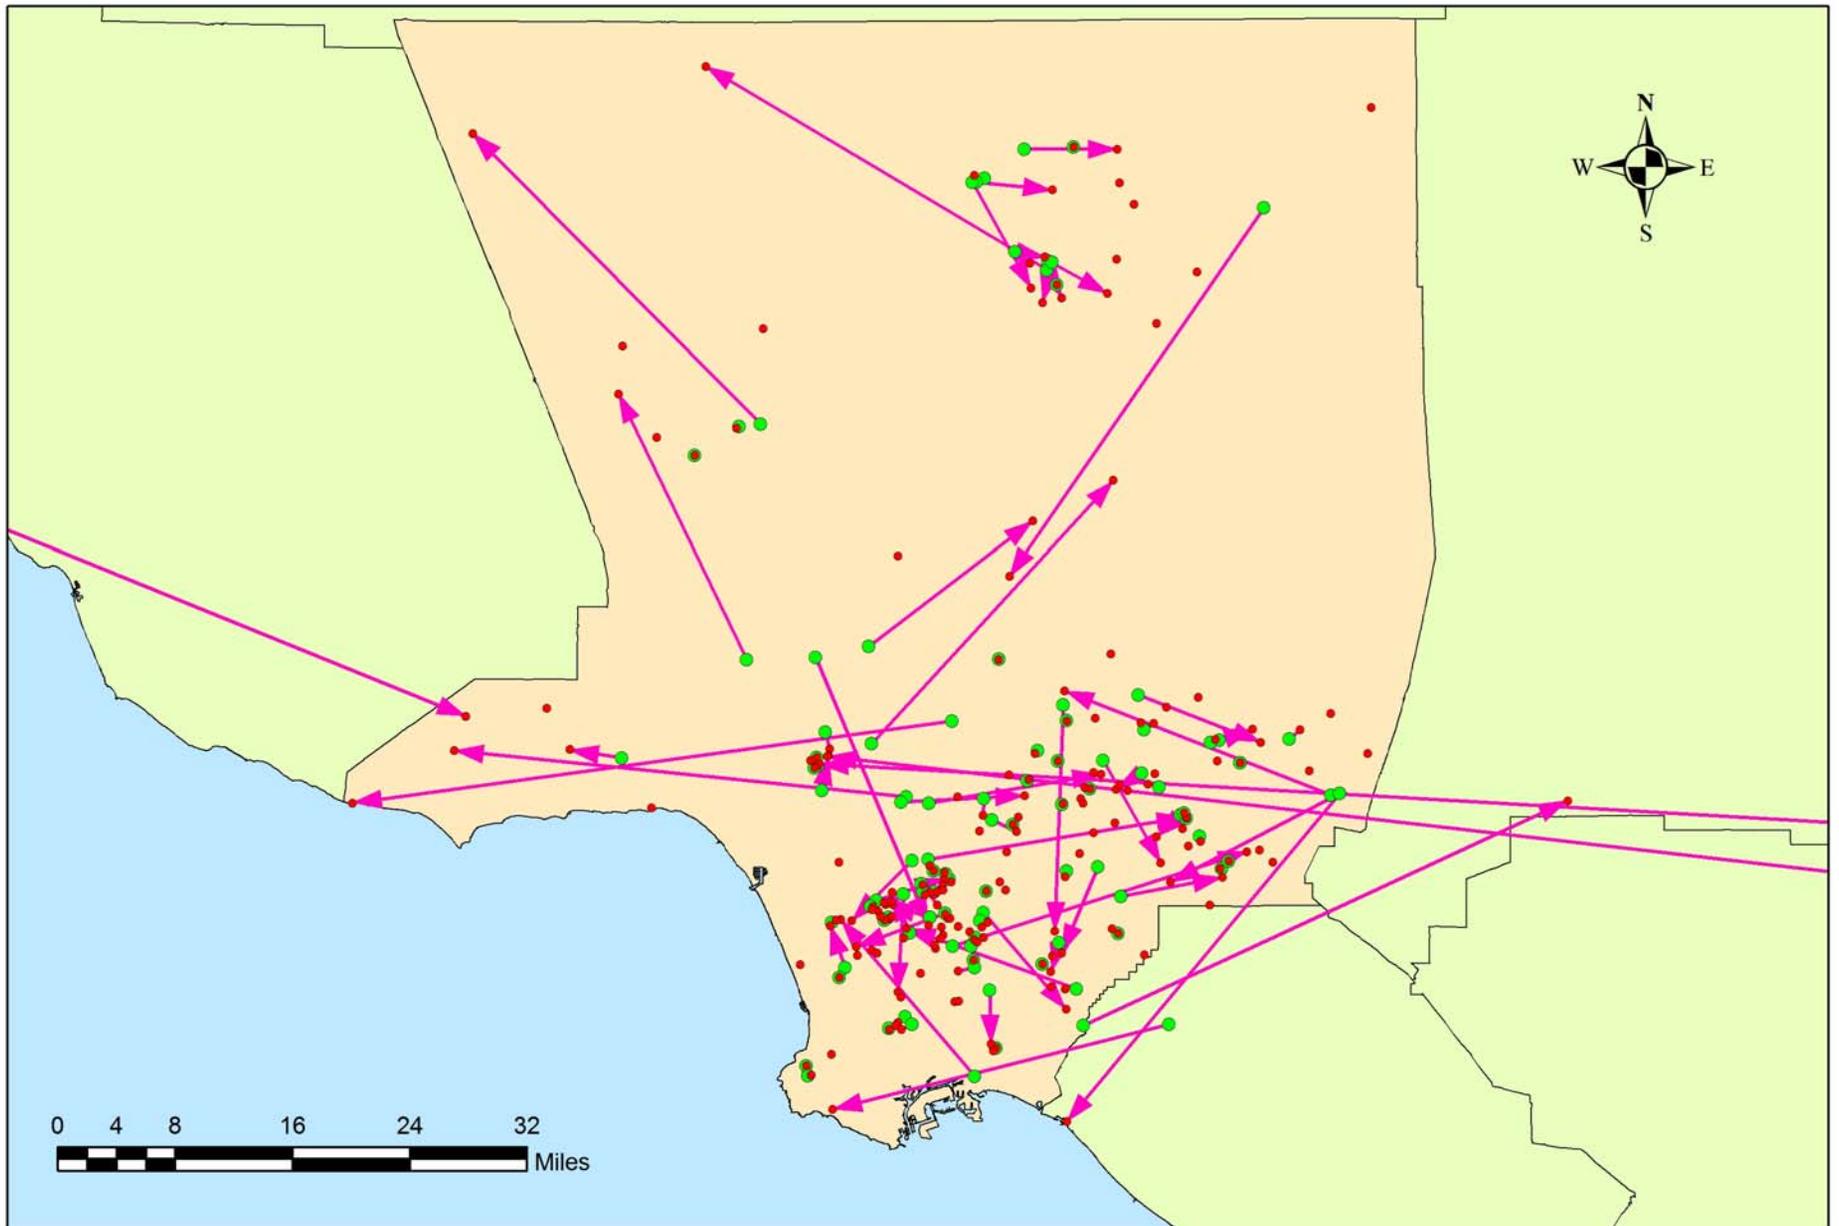

Coarse Racial Mix

	Offender		Victim	
	N	%	N	%
Non-white	84	60%	105	52.8%
White	56	40%	94	47.2%

Breakdown of Racial Mix

	Offender		Victim	
	N	%	N	%
Asian	0	0	7	3.6
Hispanic	44	31.4	43	21.6
American Indian	0	0	1	0.5
Black	40	28.6	54	27.1
White	56	40	94	47.2
Total	140*	100	199	100

Journey to Crime: Offender Residence to Body Disposal Site

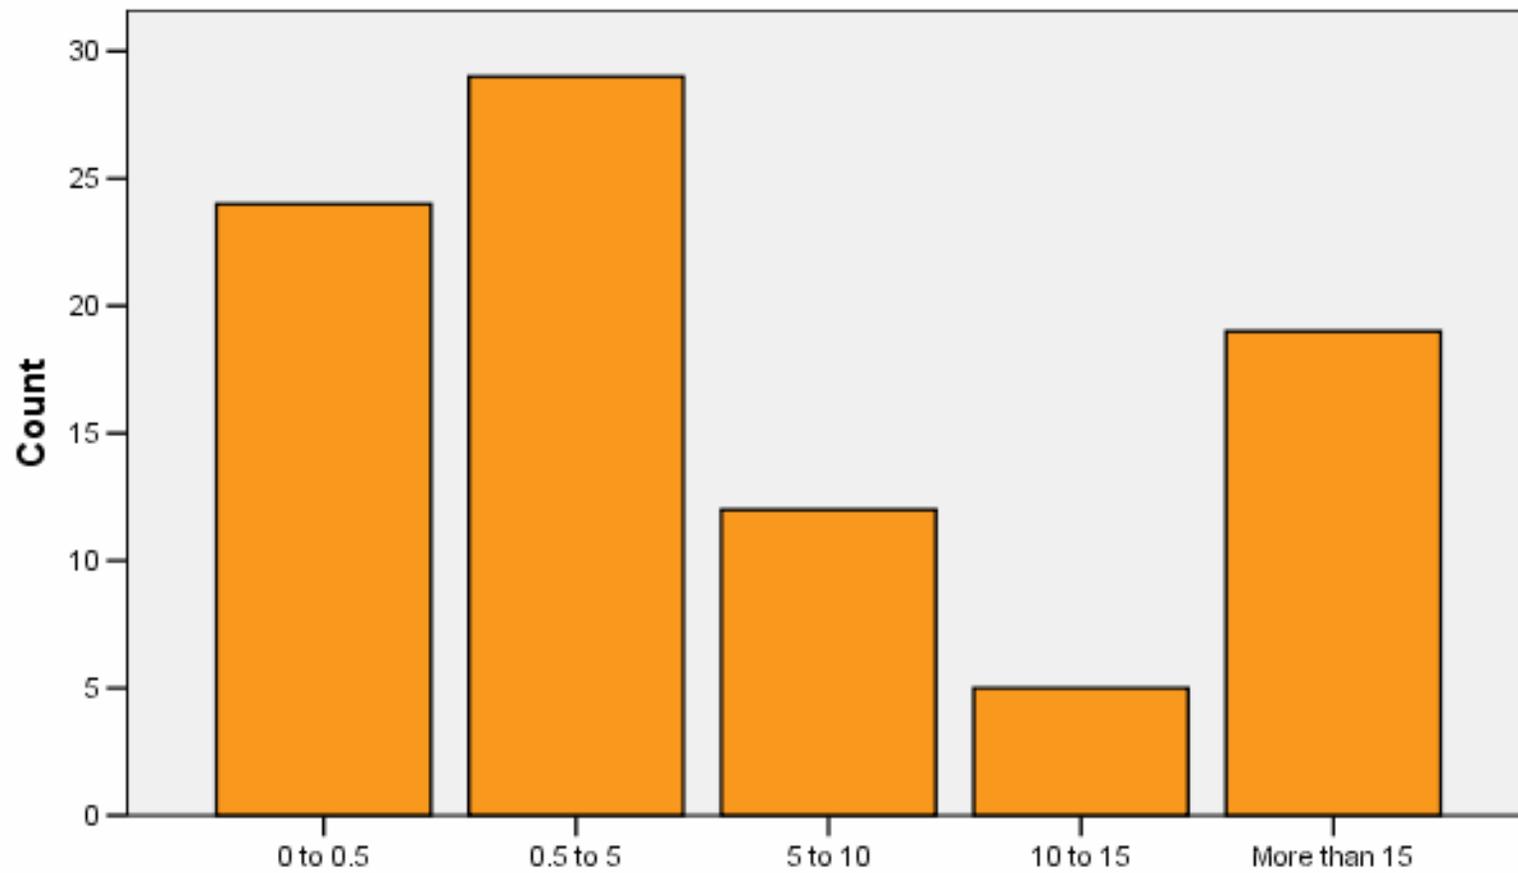

JTC: Offender Residence to Body Dump

	Miles
Mean Distance	54.21
Median	2.43
Standard Deviation	364.24
Minimum (non-zero)	.004
Maximum	3410.87
N	89*

* Includes only non-zero trips, there were 21 zero-distance "trips"

Offender Residence to Body Dump Site

Journey to Crime: Victim Residence to Body Disposal Site

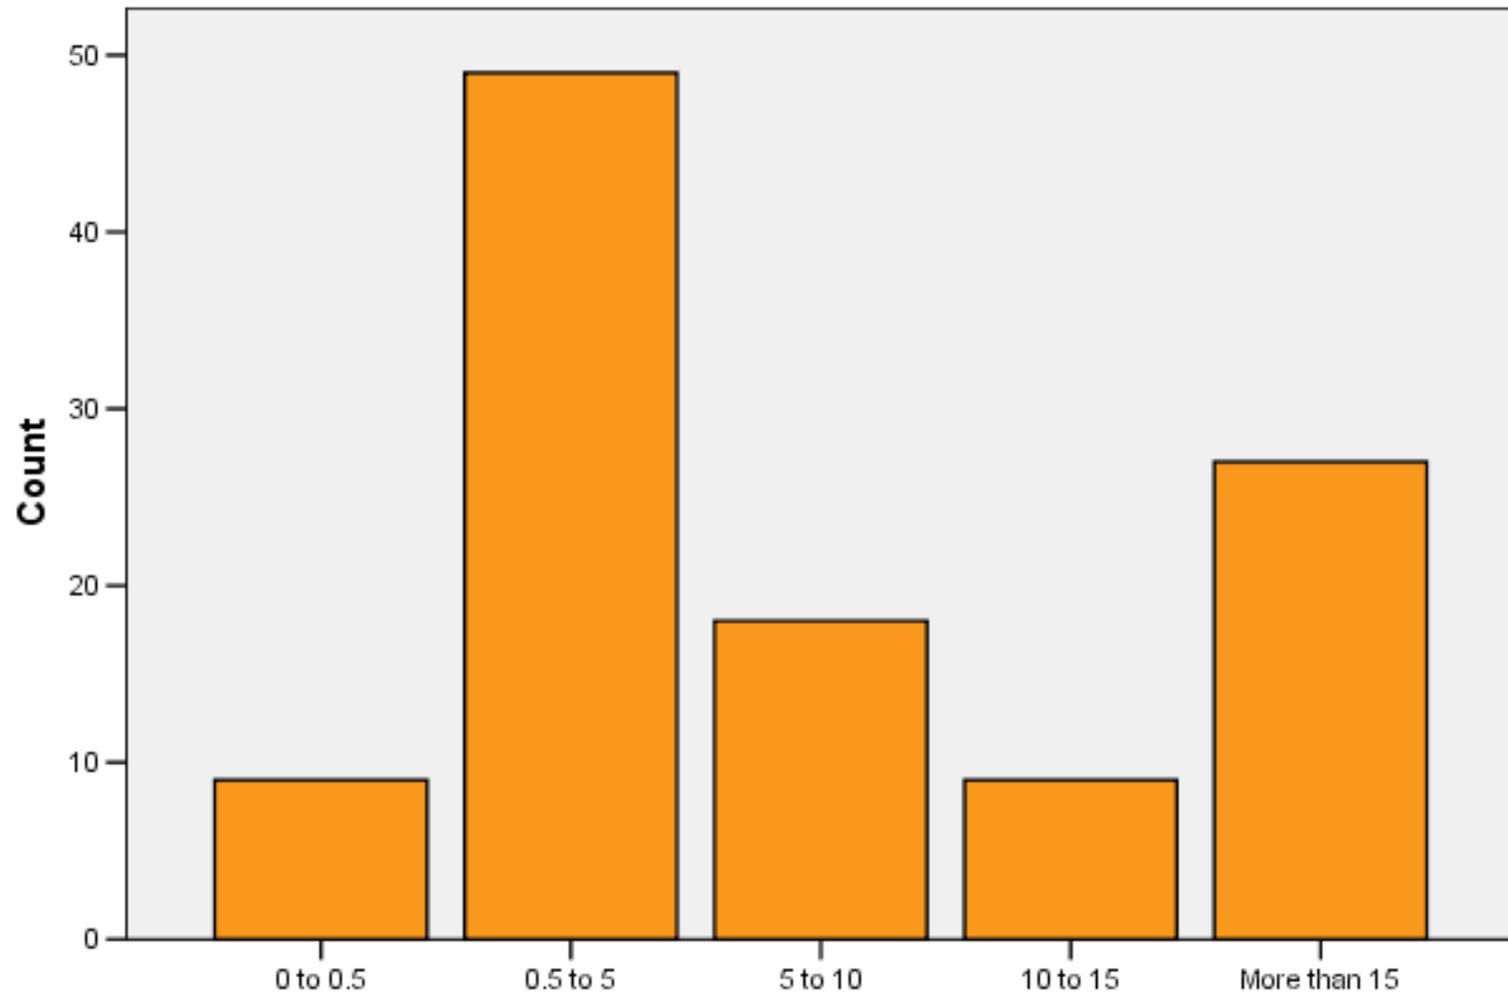

JTC: Victim Residence to Body Dump

	Miles
Mean Distance	56.92
Median	4.62
Standard Deviation	275.53
Minimum (non-zero)	.032
Maximum	2276.29
N	112*

* Includes only non-zero trips

Victim Residence to Body Dump Site

Offender to Victim Residence Links

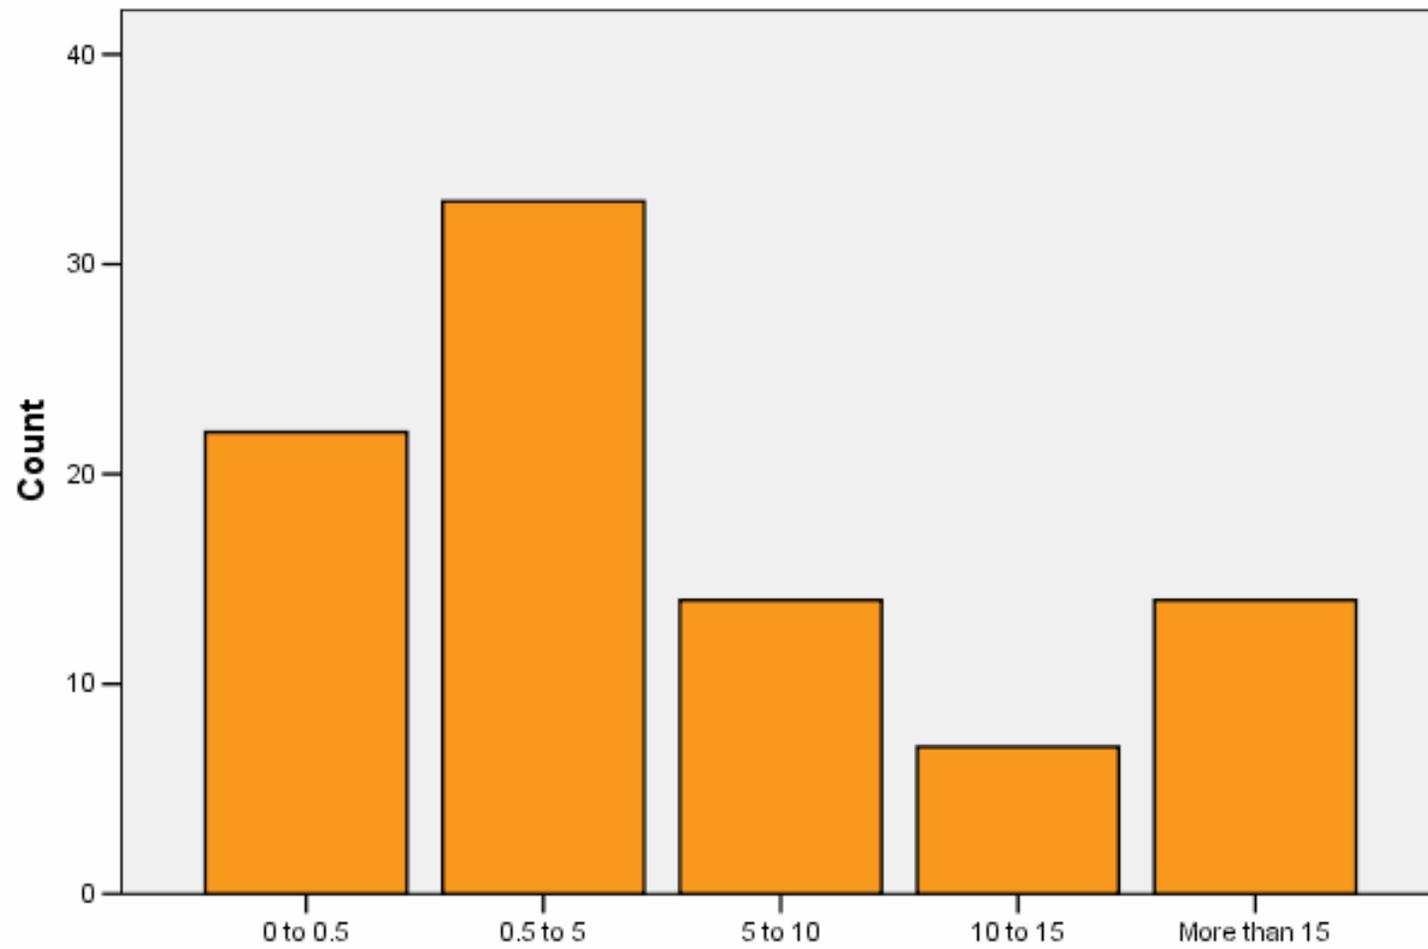

Offender Residence to Victim Residence

	Miles
Mean Distance	69.25
Median	2.88
Standard Deviation	382.48
Minimum (non-zero)	.004
Maximum	3410.87
N	90*

* Includes only non-zero trips

Offender Residence to Victim Residence

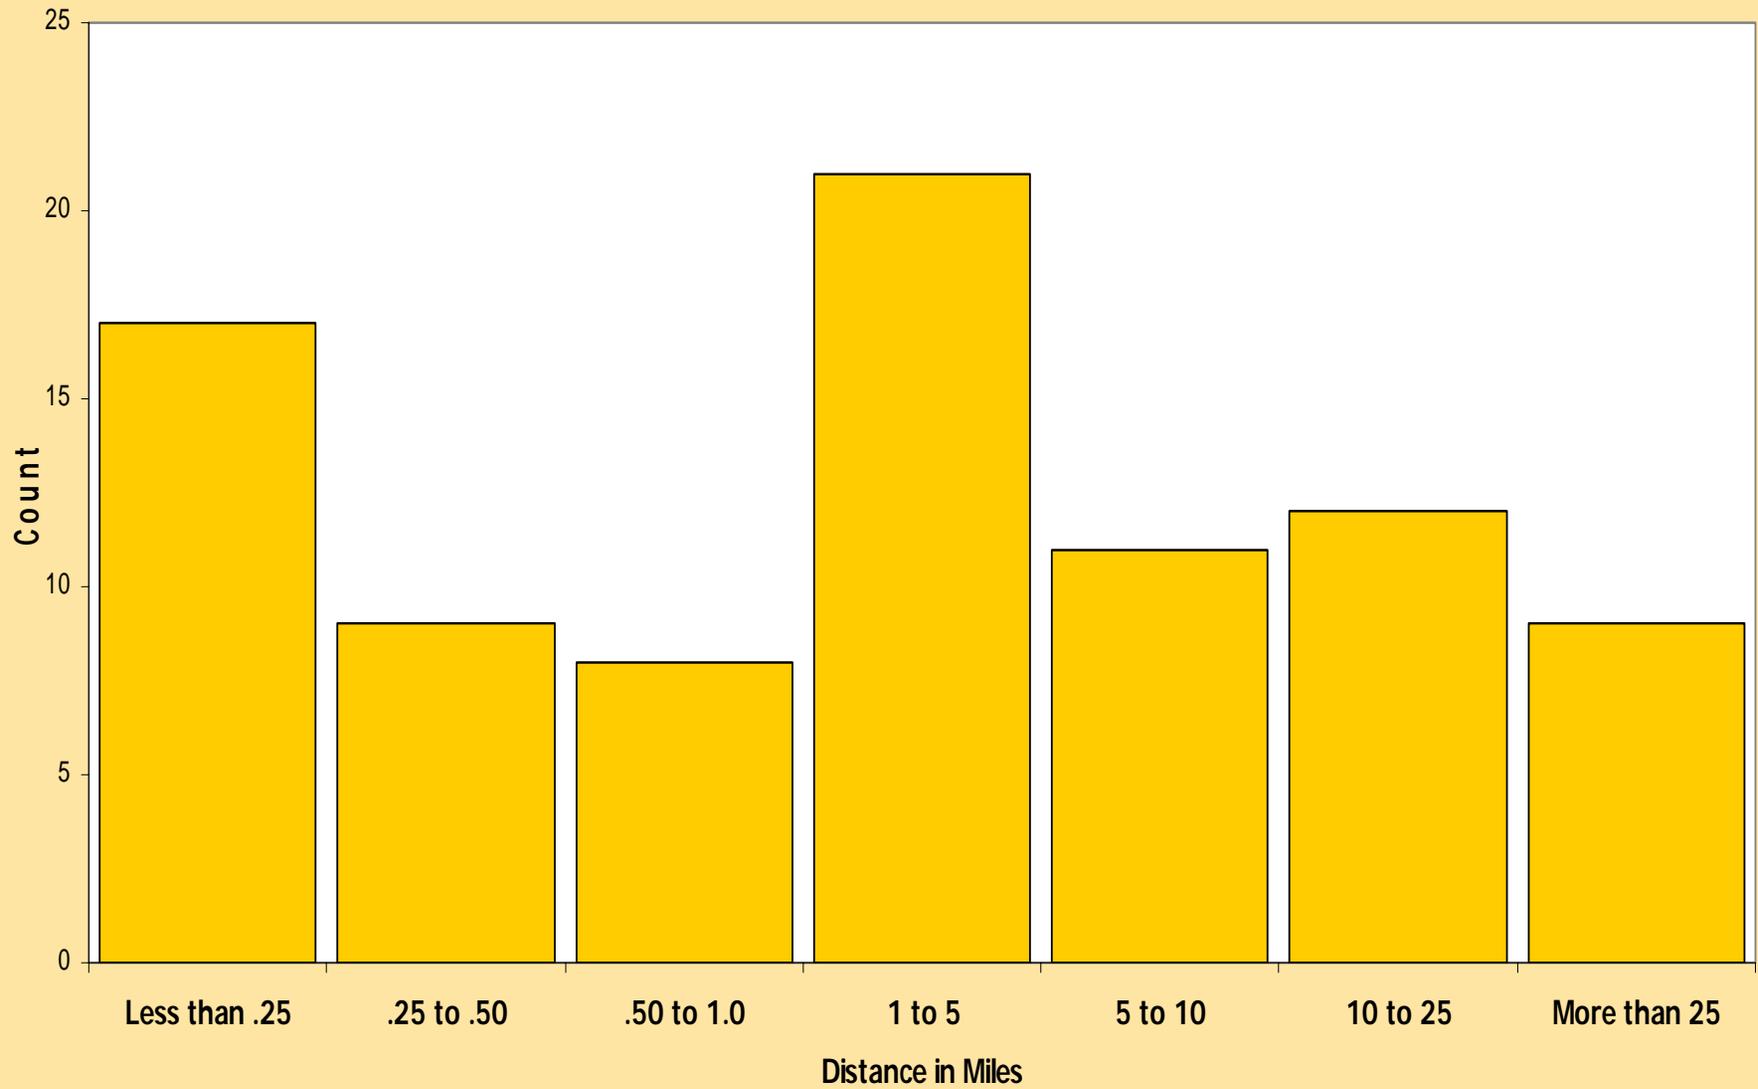

Journey After Crime

Journey After Crime

Distance Category (Miles)	Count	Percent	Cumulative
Less than .25	17	19.5	19.5
.25 to .50	9	10.3	29.8
.50 to 1.0	8	9.2	39.0
1 to 5	21	24.1	63.1
5 to 10	11	12.6	75.7
10 to 25	12	13.8	89.5
More than 25	9	10.3	100
Total	87	100	

Journey After Crime

Mobility Triangles

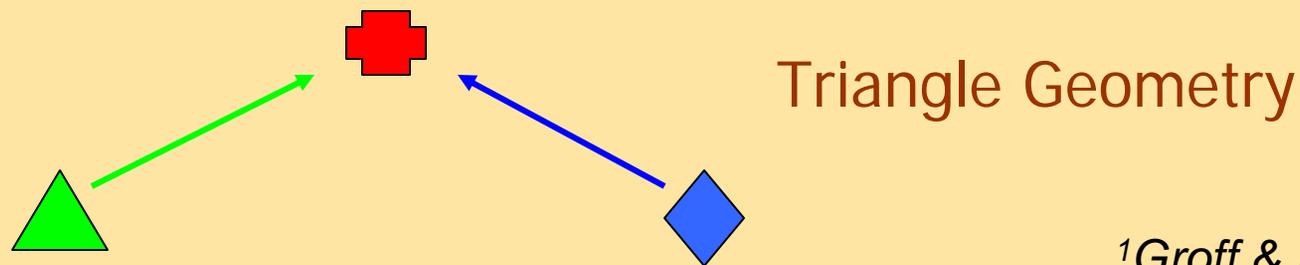

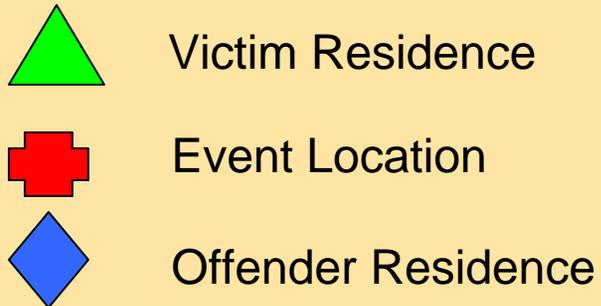

A Comparison of Traditional and
Distance Triangles in Total Homicide
and Single Motive Homicide

A Homicide Geometry¹

- The geometric relationship between offender residence, victim residence and event location
- Dots
 - All three are co-located
- Lines
 - At least two are co-located, with the third being separate
- Triangles
 - All three are separated

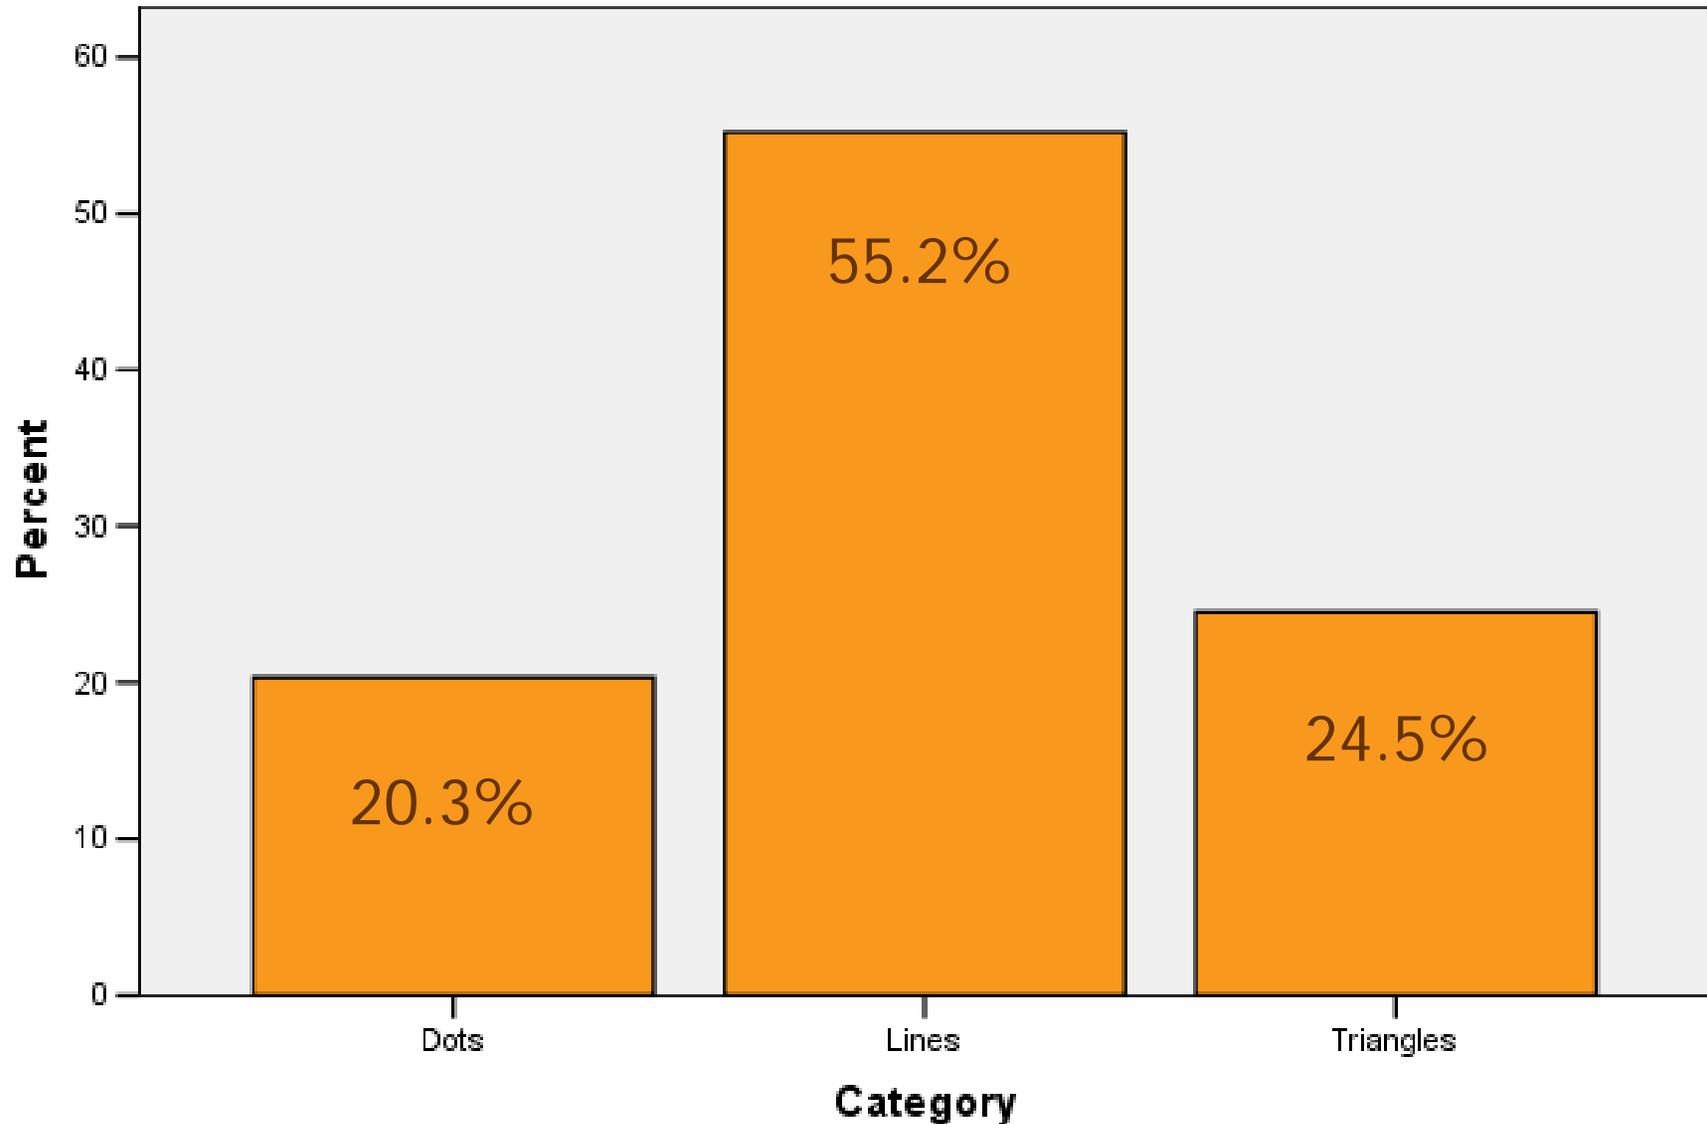

¹Groff & McEwen, 2006

A Homicide Geometry¹

¹Groff & McEwen, 2006

Sexual Homicides: Geometry

Case Status by Geometry

	Dots		Lines		Triangles	
	N	%	N	%	N	%
Open	19	48.7	55	51.9	7	14.9
Closed	20	51.3	51	48.1	40	85.1
Total	39	100	106	100	47	100

Total N = 192

$X^2 = 19.126, p < .001, \text{Cramer's } V = .32$

Tita & Griffiths, 2005

- Mobility-based triangles
 - Neighborhood based on areal analog
- Five classes
 - Internal – all share census tract
 - Predatory – offender from outside
 - Intrusion – victim from outside
 - Offense mobility – incident outside
 - Total mobility – all three have different census tract

Groff & McEwen, 2006

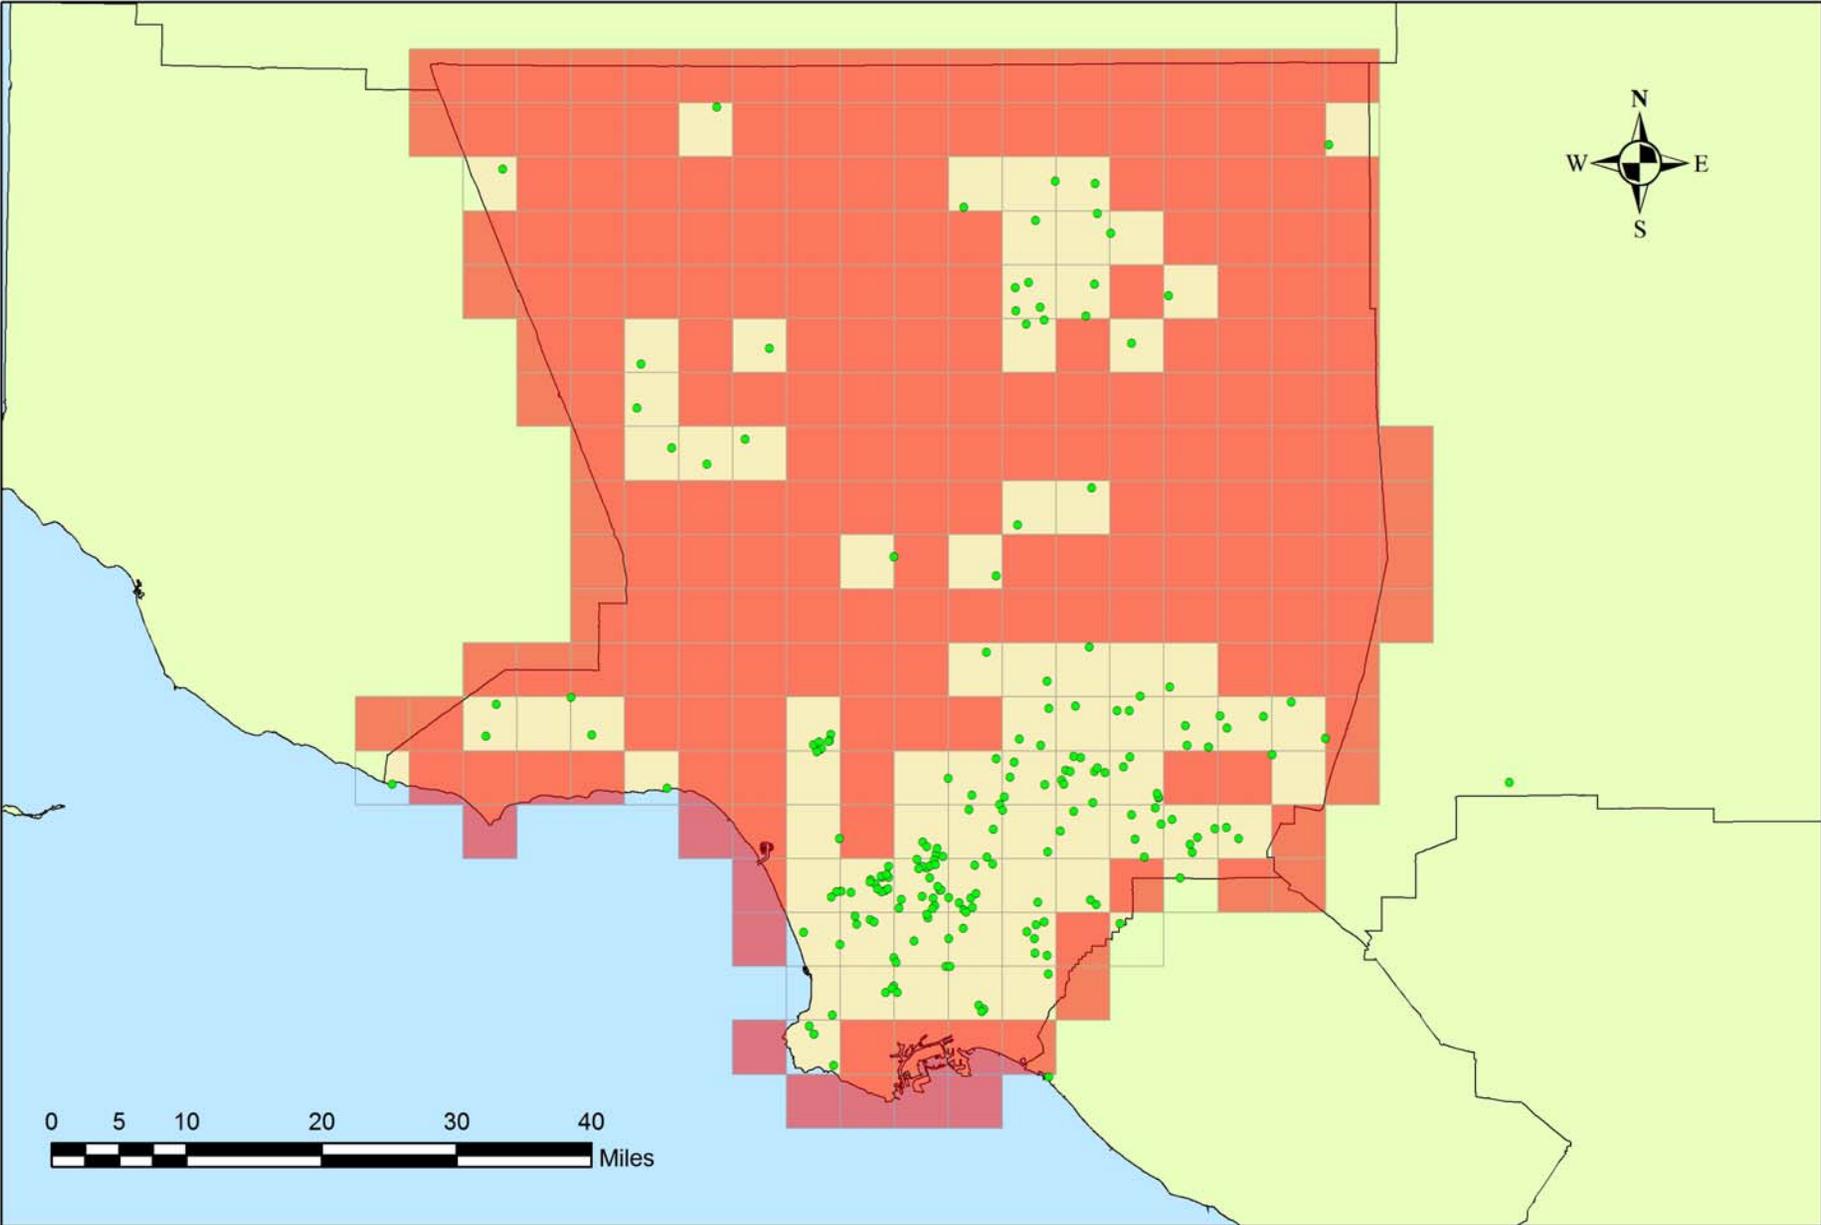

- Distance triangles
 - Neighborhood based on distance analog
- Five classes
 - Neighborhood – all events within .25 miles
 - Offender Mobility – offender from outside
 - Victim Mobility – victim from outside
 - Offense Mobility – offense is outside
 - Total Mobility – all locations more than .25 miles

At walking speed, it takes approximately 10 minutes to cover .25 miles

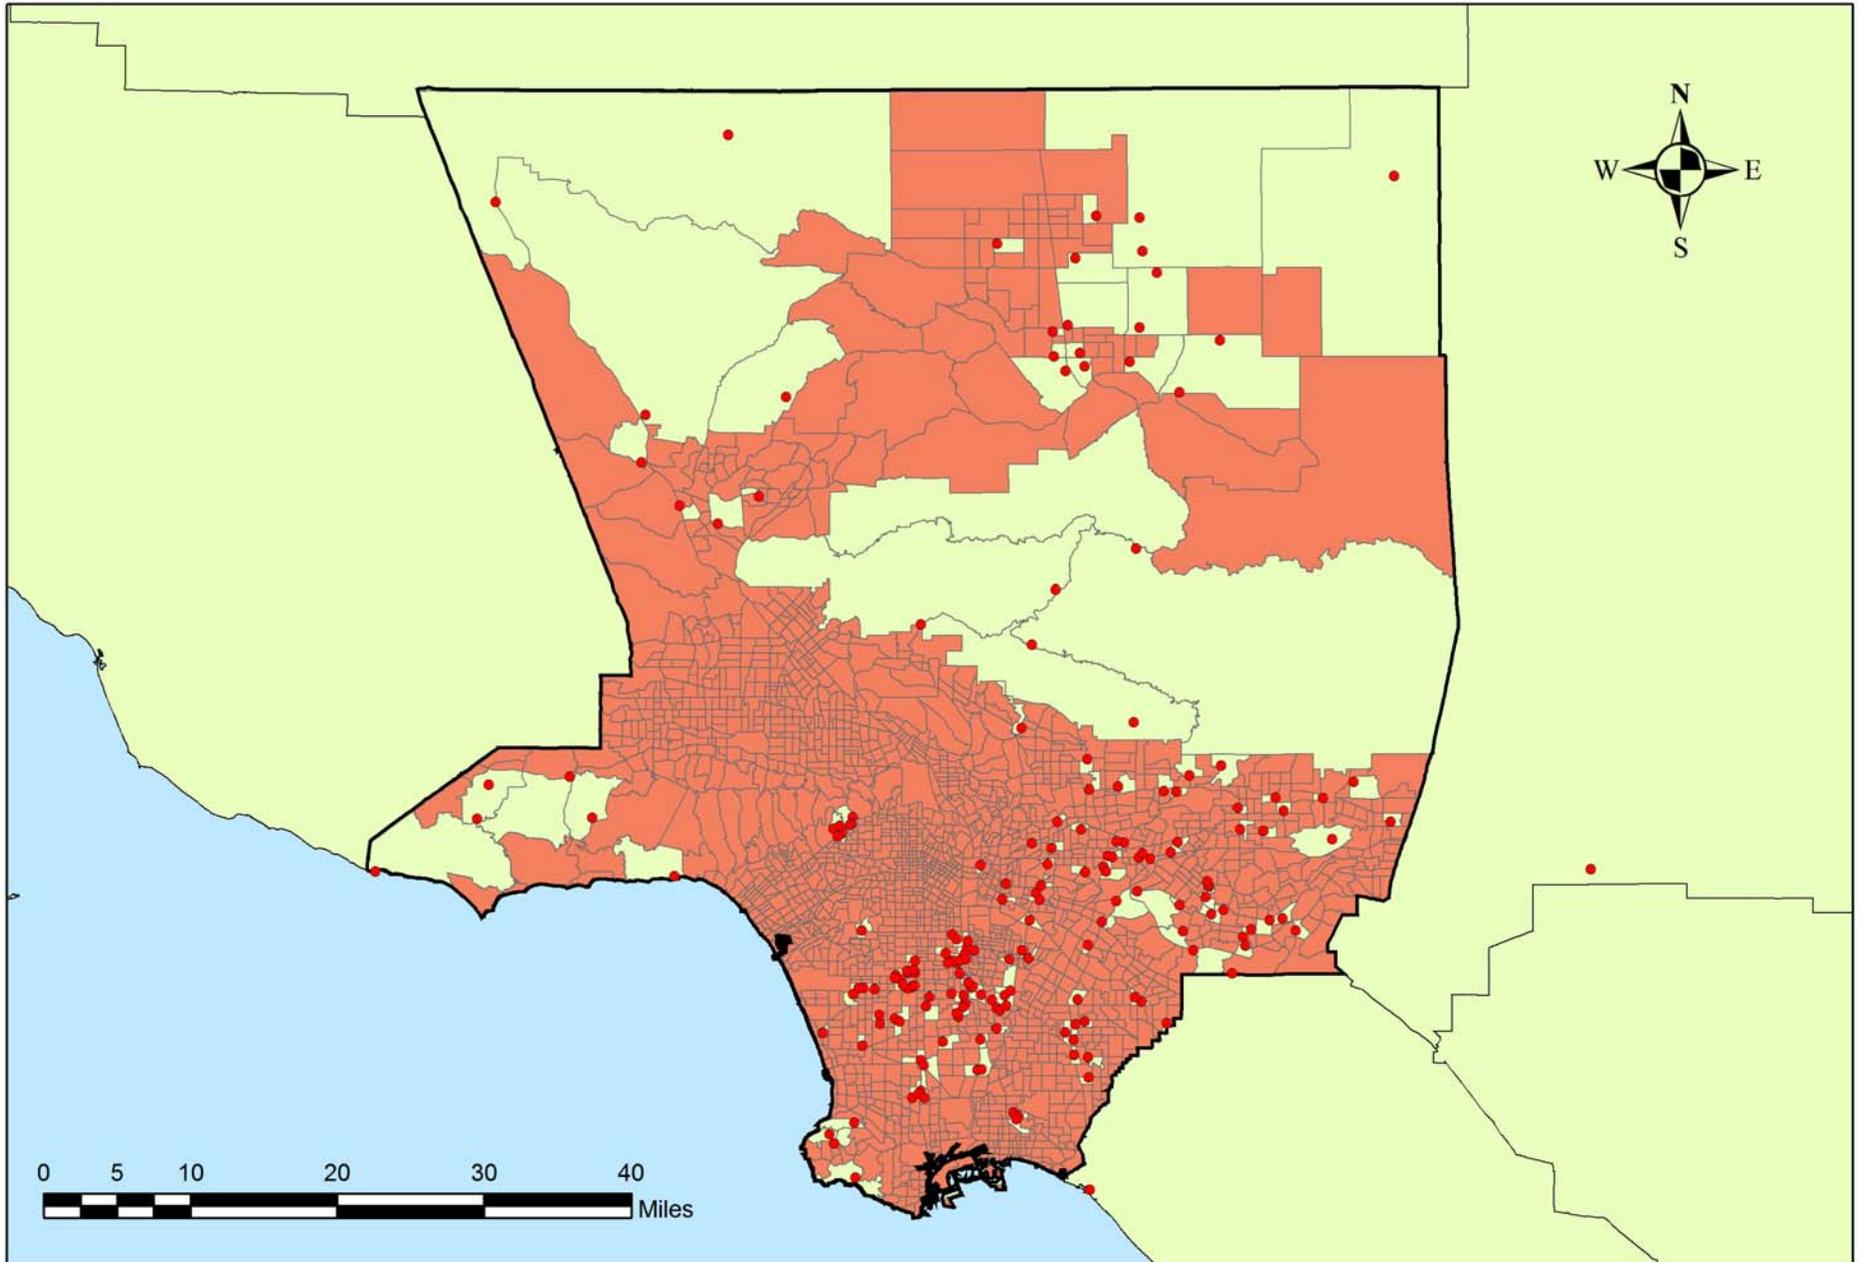

The MAUP Problem

- The modifiable areal unit problem “is a geographic manifestation of the ecological fallacy in which conclusions based on data aggregated to a particular set of [areal units] may change if one aggregates the same underlying data to a different set of [areal units].”

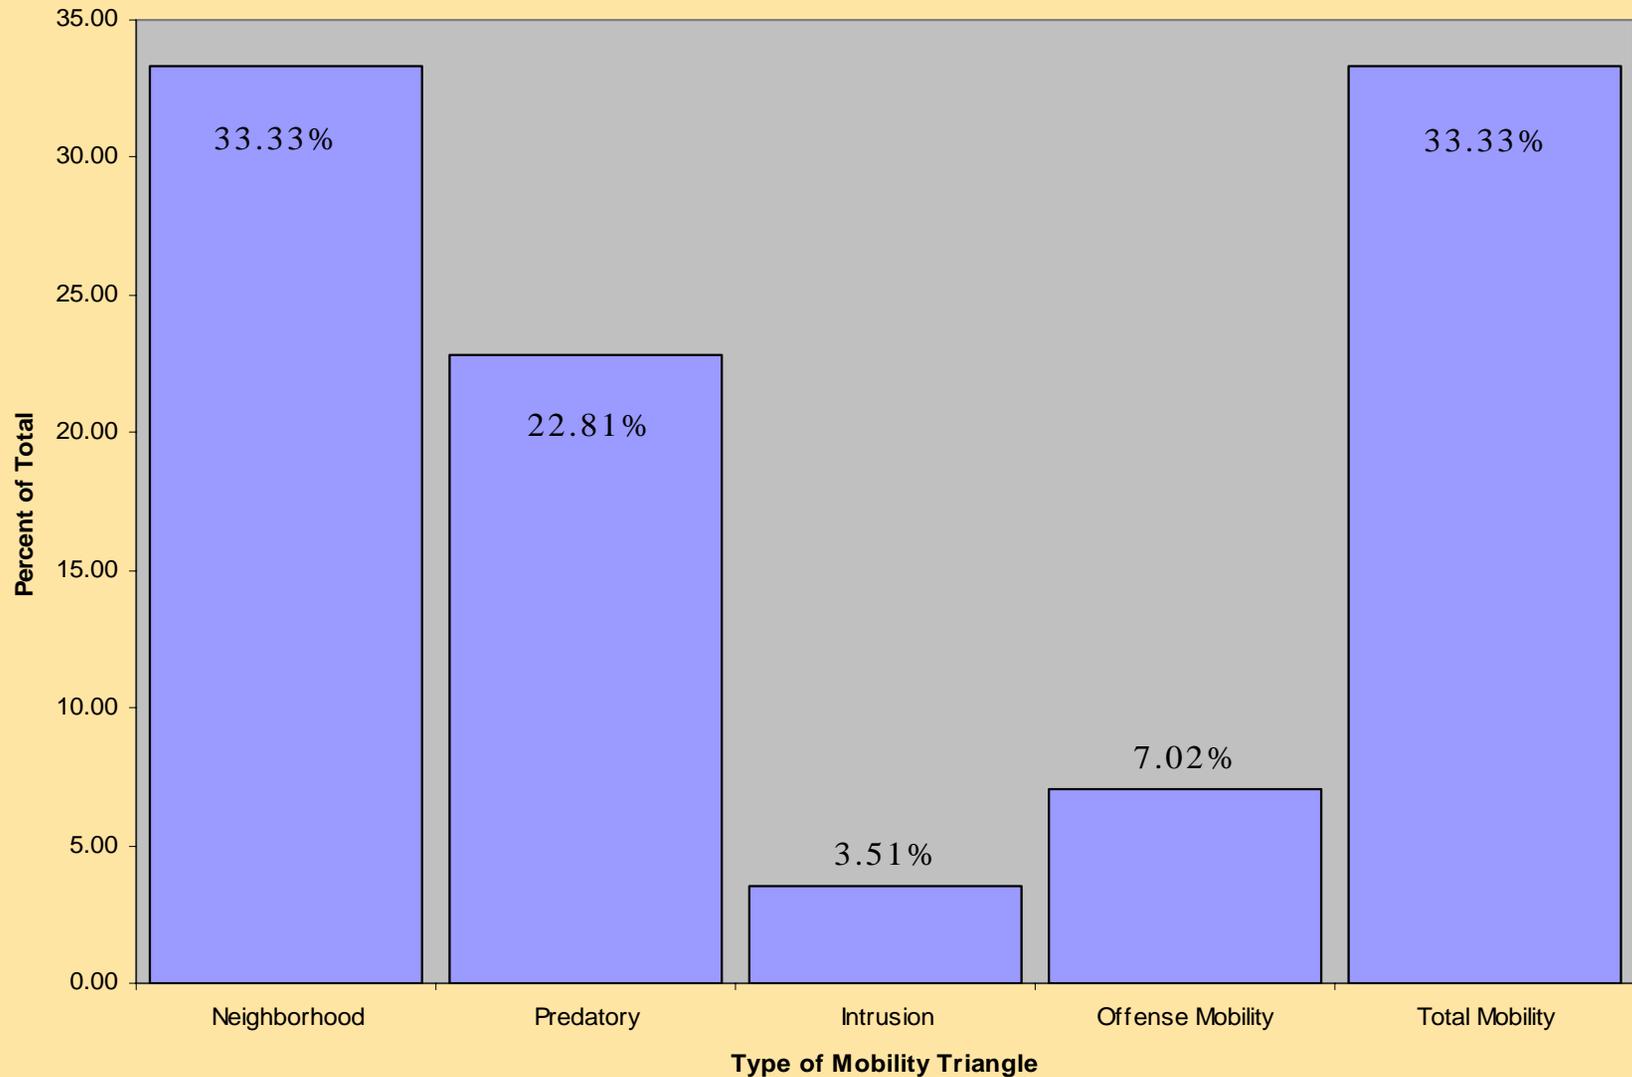

Modifiable Areal Unit Problem: Four Mile Grid

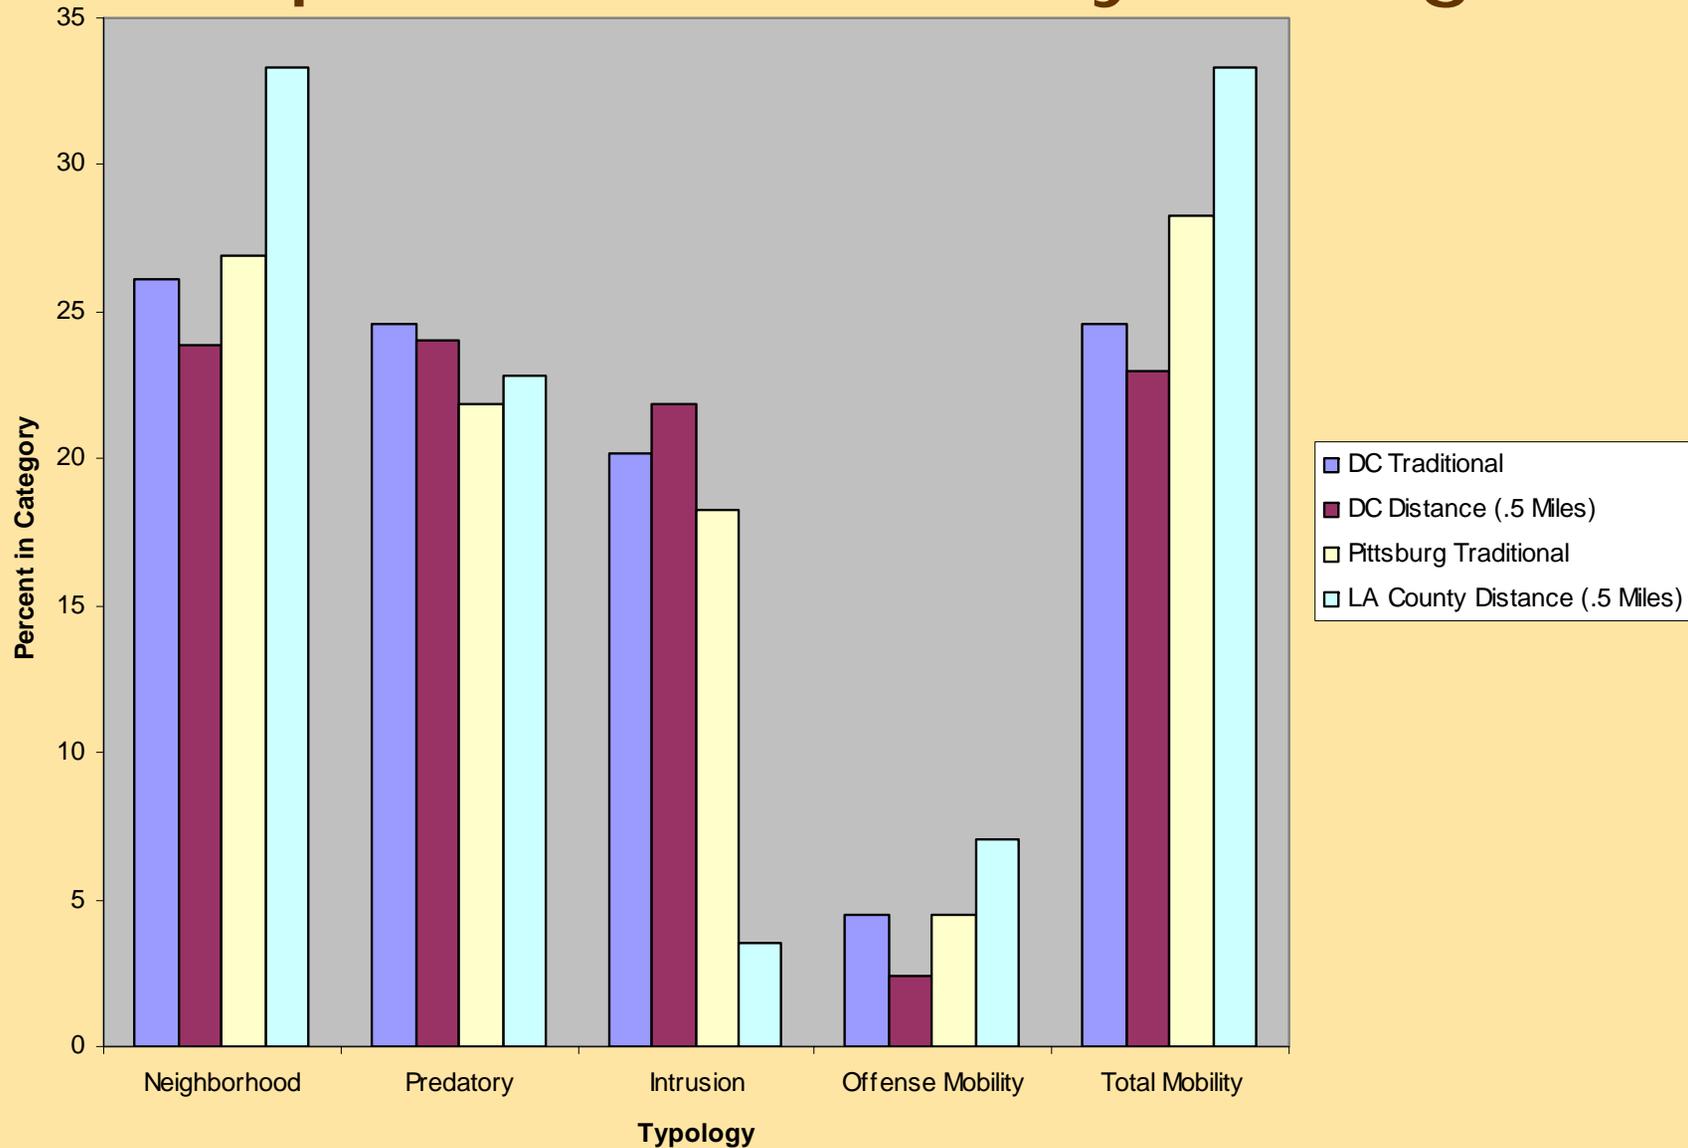

MAUP - Traffic Analysis Zones
